Disclaimers and Cautionary Language

This presentation contains forward-looking information. Forward-looking information involves risks, uncertainties and other factors that could cause actual events, results, performance, prospects and opportunities to differ materially from those expressed or implied by such forward-looking information. Forward looking information in this presentation includes, but is not limited to, Blue Sky's objectives, goals or future plans, statements regarding the estimation of mineral resources, exploration results, potential mineralization, exploration and mine development plans, timing of the commencement of operations and estimates of market conditions. Factors that could cause actual results to differ materially from such forward-looking information include, but are not limited to, failure to convert estimated mineral resources to reserves, capital and operating costs varying significantly from estimates, the preliminary nature of metallurgical test results, delays in obtaining or failure to obtain required governmental, environmental or other project approvals, political risks, uncertainties relating to the availability and costs of financing needed in the future, changes in equity markets, inflation, changes in exchange rates, fluctuations in commodity prices, delays in the development of projects and the other risks involved in the mineral exploration and development industry, and those risks set out in Blue Sky's public documents filed on SEDAR. Although Blue Sky believes that the assumptions and factors used in preparing the forward-looking information in this presentation are reasonable, undue reliance should not be placed on such information, which only applies as of the date of this presentation, and no assurance can be given that such events will occur in the disclosed time frames or at all. Blue Sky disclaims any intention or obligation to update or revise any forward-looking information, whether as a result of new information, future events or otherwise, other than as required by law.

The information provided in this presentation is not intended to be a comprehensive review of all matters and developments concerning the Company. It should be read in conjunction with all other disclosure documents of the Company. The information contained herein is not a substitute for detailed investigation or analysis. No securities commission or regulatory authority has reviewed the accuracy or adequacy of the information presented. The Company undertakes no obligation to publicly update or revise any forward-looking statements other than as required under applicable law.

We advise U.S. investors that the SEC's mining guidelines strictly prohibit information of this type in documents filed with the SEC. U.S. investors are cautioned that mineral deposits on adjacent properties are not indicative of mineral deposits on our properties.

Uranium deposits and resources owned by other companies referred to in this presentation have not been independently verified by the Corporation and information regarding these deposits are drawn from publicly available information. There is no certainty that further exploration of the Corporation's uranium targets will result in the delineation of a similar mineral resources.

Mineral resources, which are not mineral reserves, do not have demonstrated economic viability. The estimate of mineral resources may be materially affected by environmental, permitting, legal, title, taxation, sociopolitical, marketing, or other relevant issues. The quantity and grade of reported Inferred resources are uncertain in nature and there has been insufficient exploration to classify these inferred resources as Indicated or Measured, and it is uncertain if further exploration will result in upgrading them to an Indicated or Measured category.

The PEA is preliminary in nature and is based solely on Inferred Mineral Resources that are considered too speculative geologically to have economic considerations applied to them that would enable them to be categorized as Mineral Reserves. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability and there is no certainty that the PEA will be realized.

This presentation has been reviewed and approved by David Terry, Ph.D., P.Geo, a Director of the Company and a Qualified Person as defined in NI 43-101.

Investment Highlights

Value Base

22.7 Mlbs U₃O₈ Inferred Resource (28 Mt @ 311 ppm U)
Robust PEA - NPV₈:US\$135M ; IRR: 29.3% (after tax)
 - 13 years of production; simple, low-cost processing

Upside Potential

Resource remains open for Expansion;
 District Scale Uranium & Vanadium Targets
 100% Controlled

Management & Technical Capabilities

Best in class team with history of mineral deposit discovery and development success in Argentina

Commodity Fundamentals

Strong Vanadium market with Uranium rebounding

Relevant Jurisdiction

Strong support for nuclear industry in Argentina at local and federal level

- Pioneers of Exploration in Argentina since 1993
- Four major discoveries:
 - Gualcamayo Au (Mineros SA)
 - Navidad Ag-Pb (Pan American Silver Corp.)
 - Chinchillas Ag-Pb-Zn (being developed as joint-venture with SSR Mining Inc.)
 - Amarillo Grande U-V (Blue Sky Uranium Corp.)
- Strong focus on community relations

GROSSO GROUP

Team Highlights

President & Founder of Grosso Group Management Ltd. Pioneer in the exploration and mining sector in Argentina since 1993.

Joseph Grosso
Chairman & Director

One of the founders of the Company with over 25 years of management expertise in the mineral exploration industry. Extensive experience in providing strategic planning to and administration of public companies.

Nikolaos Cacos, M.I.M.
President & CEO, Director

Professional economic geologist, senior executive & director with +25 years in the mineral resources sector.

David Terry, Ph.D. P.Geo
Technical Advisor, Director

Geologist involved in exploration, development and project management in the mining industry for +22 years.

Guillermo Pensado, M.Sc.
VP Exploration

Over 30 years of uranium experience in Argentina. Senior exploration geologist & mine manager for the Argentinean National Atomic Energy Commission ("CNEA").

Jorge Berizzo, Ph.D.
Technical Advisor

Specialist in uranium processing for alkaline and acid leach plants. Technical consultant to the International Atomic Energy Agency and former President of the CIM.

Chuck Edwards, P.Eng
Technical Advisor

Argentina: Energy Industry Today & Uranium Future Opportunities

- Argentina currently highly dependent on fossil fuel and hydroelectric power but has an advanced nuclear industry:
 - 3 nuclear power plants in operation, 6 research reactors, 4 particle accelerators, 3 atomic centres, 1 heavy water plant and 1 uranium purification plant
- The government has committed to a minimum target of reducing CO₂ emissions by 15% by 2030.
 - = A nuclear energy requirement that more than doubles by 2025 (~1.25 Million pounds of U₃O_{8e} annually)
- Nuclear power industry now expanding:
 - 1 nuclear power plant now under construction
 - 2 additional in planning & 2 under proposal
- No domestic uranium for fuel production:
 - Need for security of supply could provide a “guaranteed” first customer for a domestic supplier
 - U & V could be also exported to international customers

Argentina Energy Matrix 2015

Proposed Argentina Energy Matrix 2025

Rio Negro Province: A Strong Nuclear Jurisdiction

- Broad local nuclear experience: research nuclear reactor, hydro-metallurgical lab & pilot U-enrichment plant
- Good infrastructure: power, water, rail, road
- Open and mining-friendly jurisdiction: gold, copper and coal exploration companies active in the last year; Calcatreu gold project has been reactivated
- Blue Sky's projects in mostly semi-desert, low population density areas with low environmental risk
 - Elevation of <200 metres; average rainfall of 300 mm (12 inches) per year
 - Easy to operate and access year-round; <3 hour drive to major cities and airports and ~200 km to deep sea port; shallow groundwater

*The Amarillo Grande Project
incorporates a series of new uranium-
vanadium discoveries made over 12
years along a 145 km trend covered by
~250,000 ha of mineral rights*

AMARILLO GRANDE PROJECT

Rio Negro Province

TSX-V: BSK OTC: BKUCF FSE: MAL2

Amarillo Grande – Regional Setting

- Uranium-vanadium mineralization hosted by Cenozoic and Cretaceous sediments - southeast extent of the prolific Neuquen oil basin
- Excellent uranium source rocks
 - North Patagonian Massif felsic intrusive and volcanic rocks

- Characteristics of Sandstone-Type and Surficial-Type uranium-vanadium deposits
- Sandstone-type
 - Grants District, NM and Kazakhstan deposits
 - Hosted in clastic sediments at redox boundaries
 - 18% of world resources and 41% of known deposits
- Surficial-type
 - Langer Heinrich, Namibia; Yeelirrie, West Australia
 - Hosted in ancient riverbeds (paleo-channels)
- All Mineralization Discovered to date:
 - **Located at or near surface** (generally <25 m depth) – low cost to explore
 - Hosted by **loosely consolidated clastic sediments** – no drilling, blasting or crushing required for development
 - Laterally extensive – kilometres scale

Amarillo Grande Project - Overview

The Amarillo Grande Project incorporates a series of new uranium-vanadium discoveries made over 12 years along a 145 km trend covered by ~250,000 ha of mineral rights

Santa Barbara Discovery (2006)

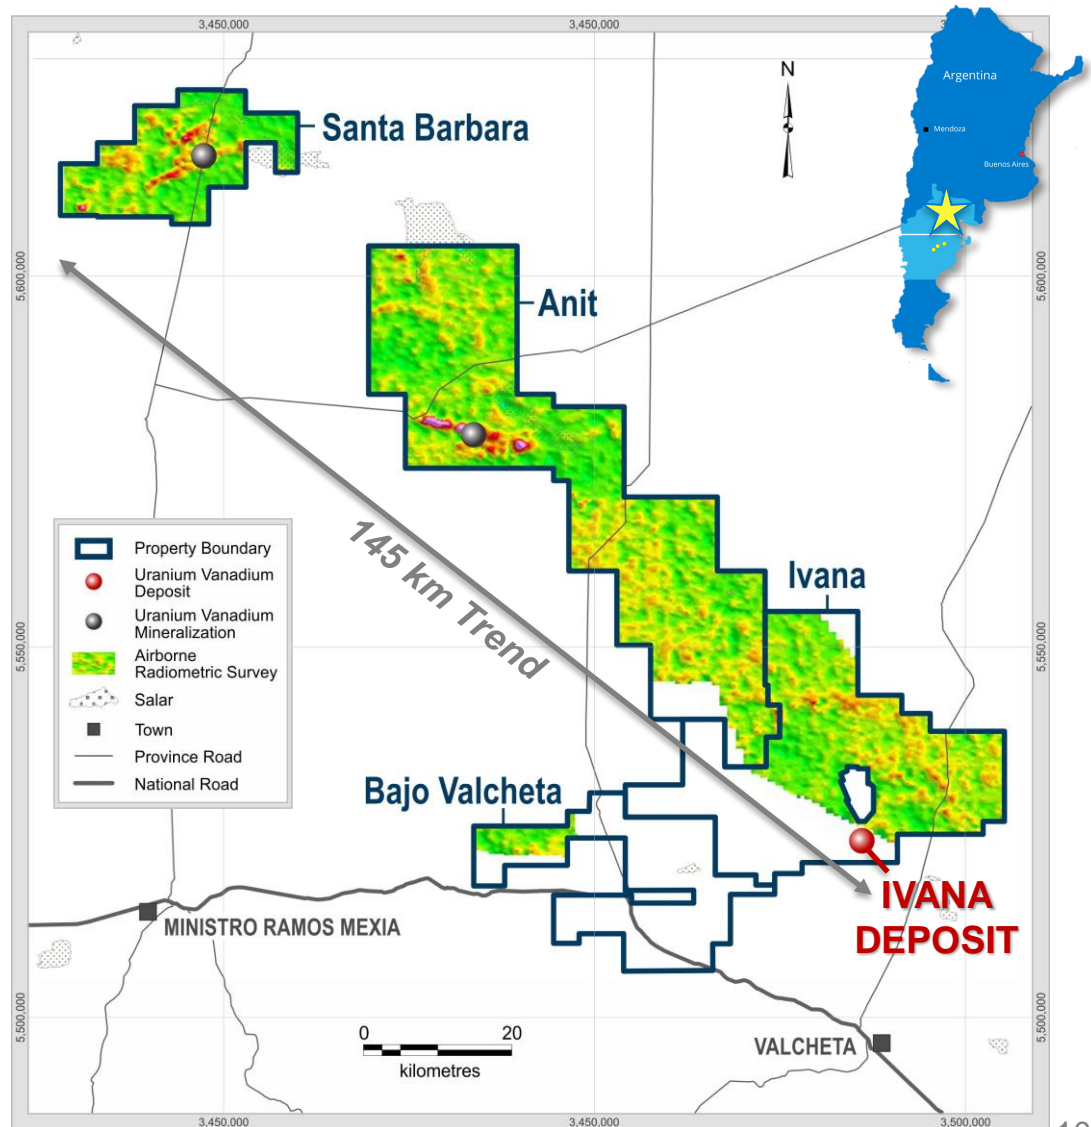

- First uranium found in Rio Negro basin
- Widespread uranium + vanadium on surface along 11 km trend

Anit Discovery (2008)

- 15 km airborne radiometric anomaly
- Aircore drilling along 5.5 km averaging 2.6 m @ 0.03% U_3O_8 and 0.075% V_2O_5 ¹

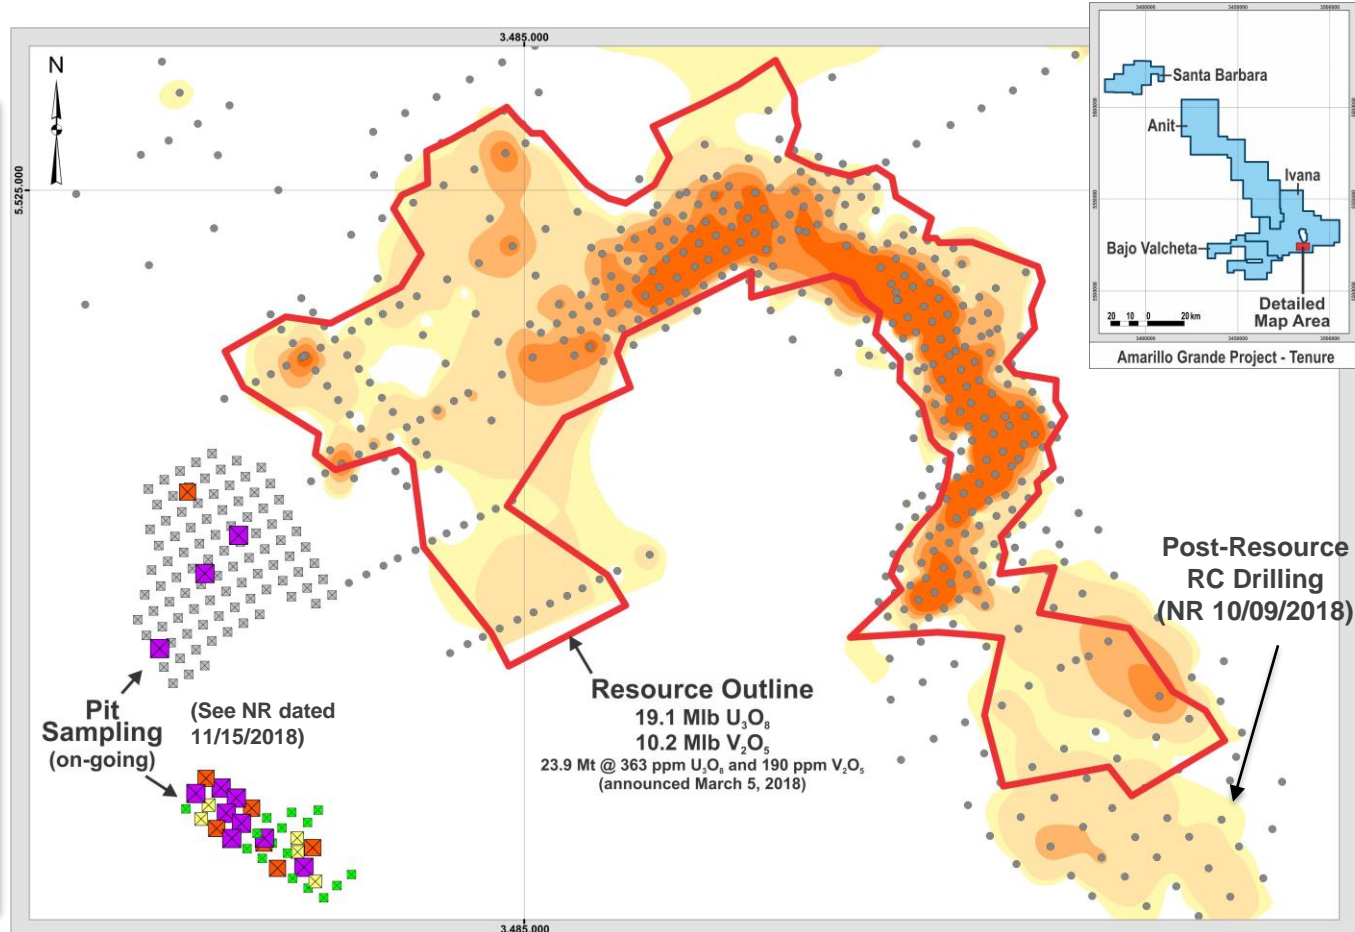

Ivana Area Discovery (2011)

- Ivana Deposit Discovery (2017)
- Initial Resource Estimate (2018)
- Initial PEA & new Resource (2019)

Ivana Deposit & Expansion Potential

- 5 km arcuate mineralized corridor with high-grade core
- Corridor 200 to +500 m wide, up to 23 m thick
- Open to expansion
- Recent Pit Sampling and RC Drilling outside resource area

TSX-V: BSK OTC: BKUCF FSE: MAL2

Legend

- RC Drilled Holes
- ⊗ Ongoing Pit Sampling

Pit Sampling Results

- <30 ppm U_3O_8 or < 200 ppm V_2O_5
- ⊠ 30-99 ppm U_3O_8 or 100-299 ppm V_2O_5
- ⊞ 100-299 ppm U_3O_8 or 300-499 ppm V_2O_5
- ⊠ >300 ppm U_3O_8 or >500 ppm V_2O_5

RC Drilling Results

- 30 - 100 ppm U_3O_8 x metre
- 100 - 500 ppm U_3O_8 x metre
- 500 - 1000 ppm U_3O_8 x metre
- 1000 - 2000 ppm U_3O_8 x metre
- >2000 ppm U_3O_8 x metre

Ivana Deposit - New Discovery

- Near-surface (<25m) uranium & vanadium mineralization hosted by loosely consolidated sand & gravel
- Oxide (carnotite) plus partially oxidized “primary” (β -coffinite) mineralization
- Characteristics of both sandstone and surficial-type deposits

Mineral Resource Statement for Ivana Deposit, Amarillo Grande Project.

Refer to News Release dated 2/27/2019 for details

Inferred Resources – Base Case at 100 ppm Uranium cut-off grade

Zone	Tonnes (Mt)	U (ppm)	U ₃ O ₈ (%)	V (ppm)	V ₂ O ₅ (%)	Contained U ₃ O ₈ (Mlb)	Contained V ₂ O ₅ (Mlb)
Upper	3.2	133	0.016	123	0.022	1.1	1.5
Lower	24.8	335	0.040	105	0.018	21.6	10
Total	28	311	0.037	107	0.019	22.7	11.5

The mineral resource estimate has been prepared by Bruce M. Davis, FAusIMM, BD Resource Consulting, Inc., and Susan Lomas, P.Geo., Lions Gate Geological Consulting Inc. who are both independent Qualified Persons as set forth by National Instrument 43-101 (“NI 43-101”).

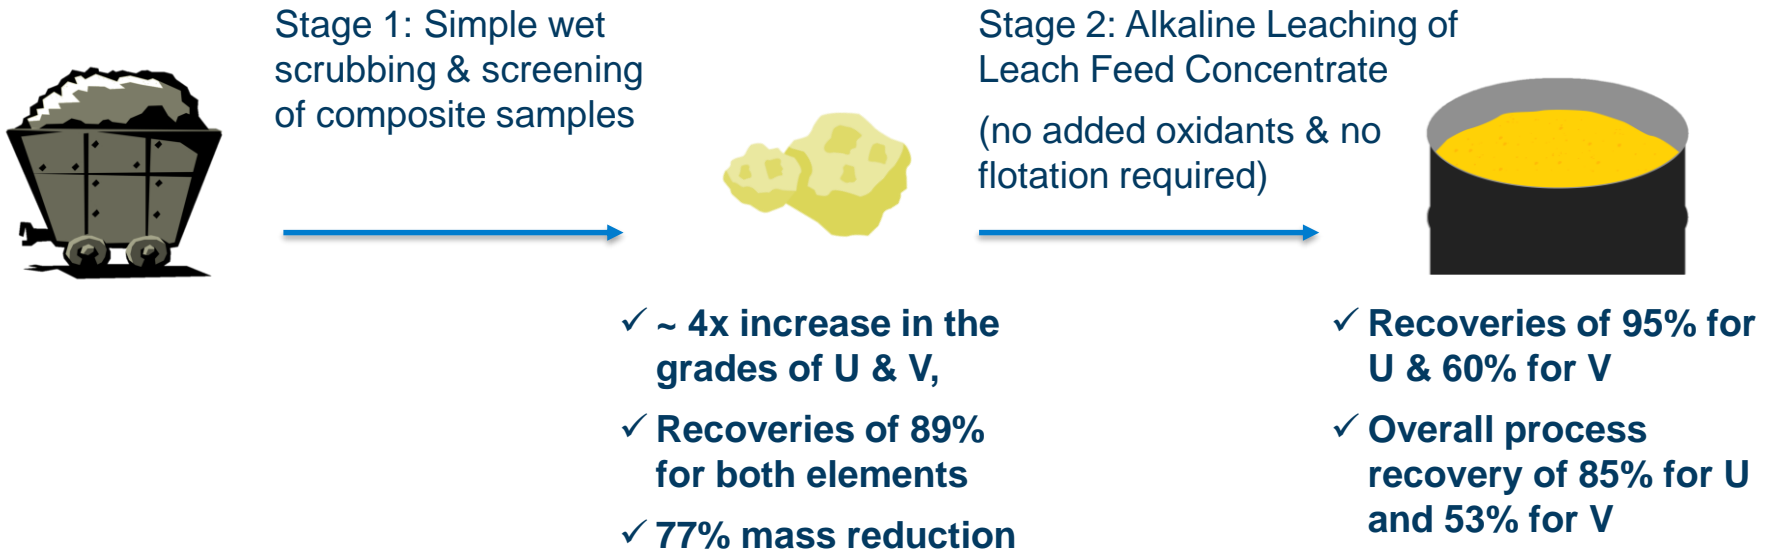

The Reader should review all Cautionary Notes and Disclaimers at the beginning of this Presentation.

1. Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability. 2. It is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration. 3. The Mineral Resources in this estimate were not constrained within a conceptual pit shell owing to the shallow nature of the deposit (<25 m). 4. The 100 ppm uranium reporting cutoff grade is based on operative costs of \$12/t, a price of \$50/lb U₃O₈, and a process recovery of 90%. A density of 2.1gr/cm³ was applied. 5. The resource was estimated within distinct zones of elevated uranium concentration occurring within the host sediments. Vanadium is associated with uranium and is estimated within the same zones. There is no indication that Vanadium occurs outside of the elevated uranium zones in the Ivana deposit area in sufficient concentrations to justify developing estimation domains focused on Vanadium.

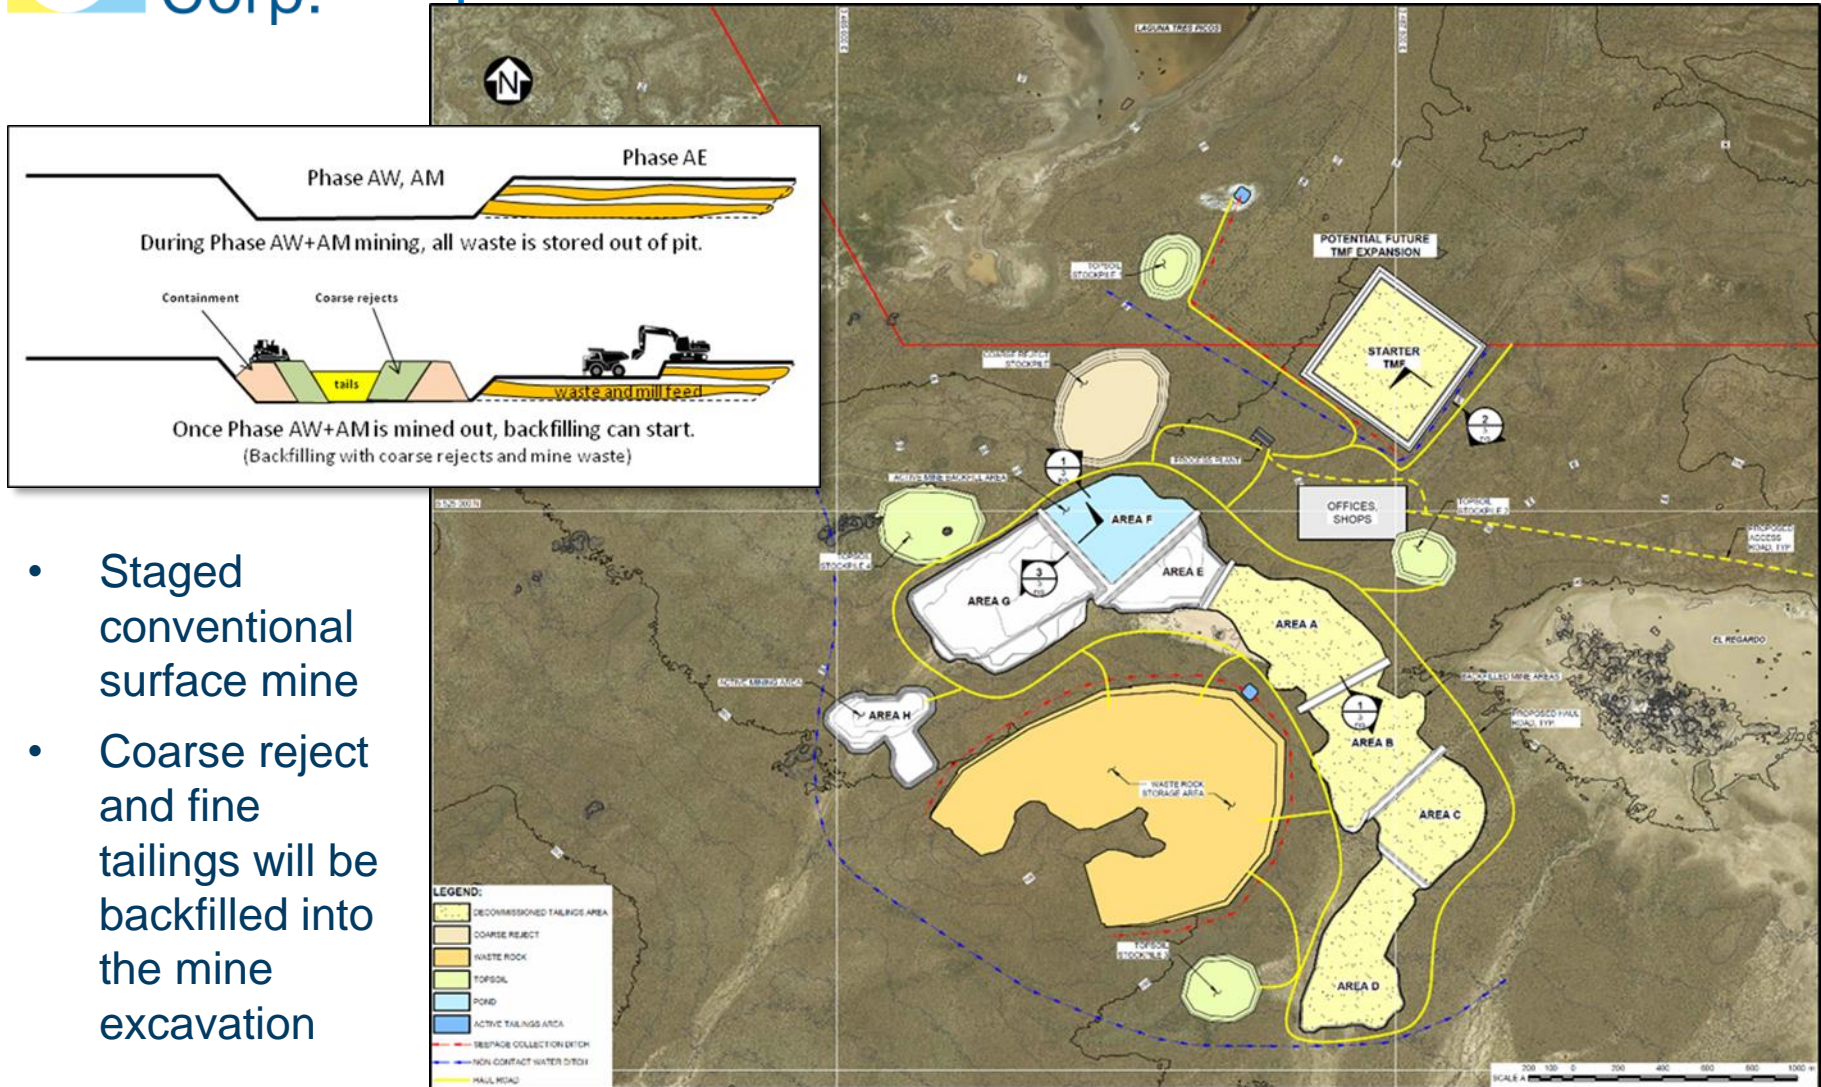

Ivana Metallurgy & Process Testing

- **Highly successful test program** optimized recovery of uranium & vanadium
- A **simple two-stage process** using low environmental impact technology & reagents

Ivana Site Layout & Backfill Plan

- Staged conventional surface mine
- Coarse reject and fine tailings will be backfilled into the mine excavation

Ivana Preliminary Economic Assessment

Based on proposed surficial mining operation, no blasting

After Tax	
NPV8%: \$135.2 million	IRR: 29.3%
	Payback period: 2.4 years
Pre-production Capital Cost: \$128.05M incl. \$28.3M contingency	LOM Sustaining Capital Cost: \$35.46M incl. \$7.21M contingency
Average LOM Total Cash Cost net of credits: \$16.24/lb U₃O₈	Average LOM All-In Sustaining Costs ("AISC") net of credits: \$18.27/lb U₃O₈

PEA Key Assumptions & Inputs	
Uranium price:	\$50/lb U ₃ O ₈
Vanadium Price	\$15/lb V ₂ O ₅
Years of Construction	2
Years of Full production:	13
Strip Ratio (waste/ore):	1.1:1
Dilution:	3%
Average Mining rate (waste + mineralized material):	13,000 tonnes per day ("tpd")
Processing throughput:	6,400 tpd
Process Plant Recoveries	Uranium: 84.6%, Vanadium: 52.5%
Average Annual Production (LOM):	1.35 MIbs/y U ₃ O ₈
LOM uranium production:	17.5 MIbs U ₃ O ₈

Ivana – Low Cost Production Potential

Amarillo Grande – District Scale High-Potential Targets

Blue Sky is a member company of the **Grosso Group**, which provides strong management and technical experience, with a focus on Argentina

Rio Negro Province is a **supportive jurisdiction** for mining with extensive industry infrastructure

The Amarillo Grande Project hosts a significant uranium-vanadium resource with local and district upside.

- Near-surface uranium & vanadium
- Robust economics with low-impact mining and processing

Exclusive rights to over 450,000 hectares of properties. Secondary projects are ready to advance under the right conditions.

Many jurisdictions believe Nuclear power is necessary:

- In more than 12 countries: 71 nuclear reactors are under construction, 165 planned, and 315 proposed
- China: Plans to spend \$2.4 Trillion to expand its nuclear power generation by 6,600%*

Uranium does not trade on an open market; buyers and sellers negotiate contracts privately; Spot price has increased from ~\$18/lb in late 2017 to \$28.90/lb today**

Go Nuclear

China on path to challenge U.S. as home of atomic power

Data: BMI Research; graphic by Bloomberg Businessweek

Morning Star***

- Expect global uranium demand to rise roughly 40% by 2025
- Low secondary supplies will cause shortfalls; estimate that this will affect price negotiations by 2019
- To encourage new supply, expected price should rise to around \$65 per pound.

Source*** - Capital IQ

85% of Vanadium production is from three countries, heavily leveraged to Iron Ore production and steel market dynamics

- Vanadium prices have increased from <\$5/lb in 2016 to >\$15/lb today¹, and vanadium was the best performing battery metal in the last 12 months

- Future demand fueled by Vanadium in redox flow batteries – Industrial energy story and distribution
- China National Development and Reform Commission calls for multiple pilot projects of 100- MW-scale vanadium flow batteries by end of 2020²
- Robert Friedland on pilot project: “...will result in vanadium flow batteries revolutionizing modern electricity grids in the way that lithium-ion batteries are enabling the global transition to electric vehicles.”¹
