Discovering Uranium and Vanadium in Argentina

SEPT 2017

Blue Sky Uranium Corp. is a leader in uranium discovery in Argentina. The Company's flagship Amarillo Grande Project was an in-house discovery of a new district that has the potential to be among the first domestic suppliers of uranium to the growing Argentine market. The project also has the potential for significant vanadium, which has seen a recent market resurgence.

The Company's objective is to deliver exceptional returns to shareholders by delineating uranium resources in anticipation of a return to a positive uranium market.

Blue Sky Uranium is a member of the Grosso Group, a resource management group that pioneered the mineral exploration industry in Argentina and has operated there since 1993..

Fast Facts

- Positive growth outlook for Argentina nuclear industry - mandate to more than double nuclear power usage by 2025.
- No domestic uranium supply means there is an opportunity window for local, low-cost, near-term producers to supply the local nuclear market
- Blue Sky controls new uranium district:
Amarillo Grande Project in Rio Negro province
 - Near-surface mineralization
 - Expansion potential along trend and at depth
 - Aggressive exploration program underway
 - Recent drill results include 1,861 ppm U₃O₈ over 3m within 405 ppm U₃O₈ over 20m at Ivana target
 - Vanadium drill results include 3,411 ppm V₂O₅ over 1m at Anit target
- Successful management and technical team with extensive experience in Argentina

DIRECTORS/MANAGEMENT:

Nikolaos Cacos, M.I.M.
President & CEO, Director
Darren C. Urquhart, C.A.
CFO, Corp. Secretary, Director
David A. Terry, PhD., P. Geo,
Director

ADVISORS & CONSULTANTS

Joseph Grosso
Management Advisor
Guillermo Pensado, M.Sc. CPG
Technical Consultant
Jorge Berizzo, PhD.
Technical Consultant

SHARE STRUCTURE:

(as of Sept 5, 2017)

Issued	71,683,565
Warrants (Avg \$0.50)	4,322,352
Options (Avg \$0.48)	393,500
Fully Diluted	76,399,417

AMARILLO GRANDE PROJECT

Excellent Candidate to be the first low-cost, domestic uranium supplier in Argentina

- A New Uranium District in central Rio Negro
- Exclusive rights to over 269,000 hectares
- 140 km long trend of uranium mineralization

Potential for Low-Cost Mining

- Near-surface mineralization in weakly cemented host rocks
- Leachable carnotite mineralization
- Preliminary metallurgy indicates potentially upgradeable with simple techniques to reduce processing and transport costs
- Multiple mineralized zones along the trend could be feeders to a central processing facility

Potential for Short Lead-Time to Mining

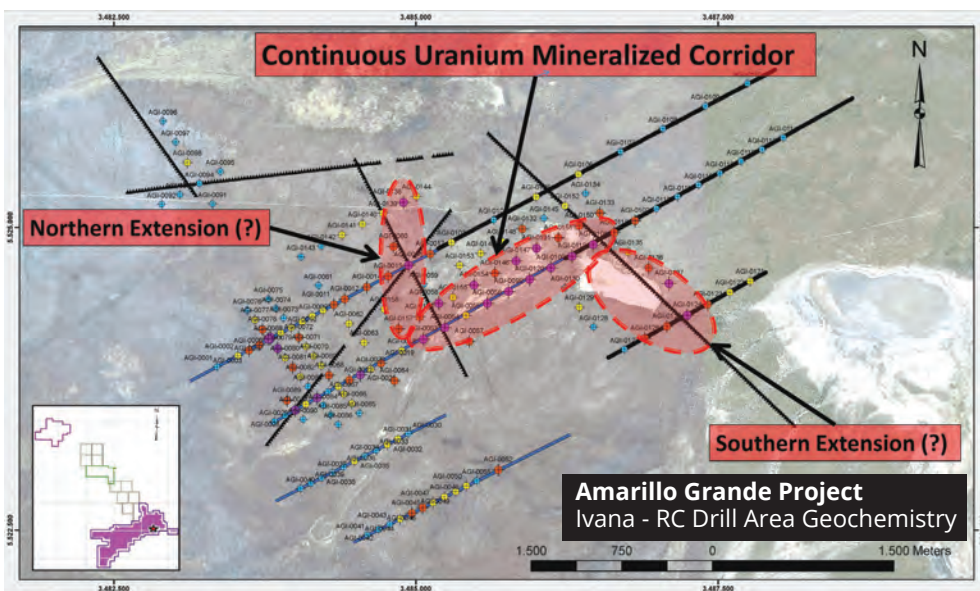

- Resource delineation programs underway
- Low elevation, semi-desert with low population density
- Good infrastructure: road, rail & power

Significant potential to identify additional mineralization along the trend

Opportunity to identify a primary (Sandstone-hosted) deposit in this geologic environment, at depth

Aggressive Exploration Program underway towards Resource Delineation

- Phase I RC drill program complete; 3,730 m in 256 holes
- Defined a strongly mineralized corridor at Ivana >2 km long, 200 to >400 m wide, up to 20 m thick, & open to expansion to the SE and N. Contains a higher-grade core zone >1 km long
- New mineralization identified with sandstone deposit characteristics
- Follow-up geophysical surveys and drill program underway with a goal of resource estimation
- Metallurgical studies underway

Recent Ivana RC Drilling Highlights

- 1,861 ppm U_3O_8 over 3 m within 405 ppm U_3O_8 over 20 m in AGI-0100
- 1,410 ppm U_3O_8 over 1 m within 571 ppm U_3O_8 over 6 m in AGI-0120
- 942 ppm U_3O_8 over 1 m within 575 ppm U_3O_8 over 3 m in AGI-0124
- 877 ppm U_3O_8 over 1 m within 423 ppm U_3O_8 over 7 m in AGI-0119
- 835 ppm U_3O_8 over 1 m within 447 ppm U_3O_8 over 6 m in AGI-0137
- 814 ppm U_3O_8 over 1 m within 570 ppm U_3O_8 over 5 m in AGI-0099
- 647 ppm U_3O_8 over 1 m within 420 ppm U_3O_8 over 5 m in AGI-0131
