BLUE SKY URANIUM CORP.

MANAGEMENT’S DISCUSSION AND ANALYSIS
FOR THE YEARS ENDED DECEMBER 31, 2018 AND 2017

Background
This Management’s Discussion and Analysis (“MD&A”) should be read in conjunction with the consolidated financial statements of Blue Sky Uranium Corp. (“Blue Sky” or “the Company”) for the years ended December 31, 2018 and 2017 and related notes thereto which have been prepared in accordance with International Financial Reporting Standards (“IFRS”). All figures are in Canadian dollars unless otherwise noted. This MD&A has been prepared as of April 9, 2019.

Company Overview
The Company was incorporated under the Business Corporations Act (British Columbia) on November 30, 2005 as Mulligan Capital Corp. On May 18, 2006, the Company received final receipts for a prospectus and became a reporting issuer in British Columbia and Alberta. On June 27, 2006 the Company completed its initial public offering (the “Offering”) and on June 28, 2006 the Company listed its common shares on the TSX Venture Exchange (the “TSX-V”) as a capital pool company. On February 7, 2007, the Company completed its qualifying transaction (the “QT”) and was upgraded to Tier II status on the TSX-V. The Company also changed its name to Blue Sky Uranium Corp. to reflect its business as a junior uranium exploration company. The address of the Company’s registered office is Suite 312 – 837 West Hastings Street, Vancouver, BC, Canada V6C 3N6.

The Company is a junior mineral exploration company engaged in the business of acquiring, exploring and evaluating natural resource properties and either joint venturing or developing these properties further or disposing of them when the evaluation is completed. The Company’s material mineral properties of interest are all located in Argentina. Blue Sky is one of Argentina’s leading uranium exploration companies with more than 4,000 km² of tenements. Argentina has an advanced nuclear industry, centred in the Rio Negro Province. As of the date of this report, the Company has not earned any production revenue, nor defined any mineral resources or reserves on any of its properties.

David Terry, PhD., P.Geo. is a member of the Board and is a Qualified Person as defined by NI 43-101 and has reviewed and approved the exploration information and technical disclosure contained in this MD&A. The Company has Quality Assurance/Quality Control protocols in place for all sampling programs as part of all auguring, geochemical sampling, sample preparation, sample shipping and sample analysis and compilation procedures.

Outlook
Blue Sky is one of Argentina’s leading uranium exploration companies with more than 4,000 km² of tenements. Argentina is the largest generator of electricity from nuclear energy in South America, with its advanced nuclear industry centred in Rio Negro Province. The country is working to further expand its nuclear energy sector with additional power plants, but lacks a ready internal supply of uranium. Blue Sky’s goal is to acquire, explore and advance towards production a portfolio of projects with an emphasis on near-surface uranium deposits that have the potential for near-term low-cost production to service the Argentine domestic nuclear industry.

PRINCIPAL PROPERTIES
In 2008, the Company gained control of a land package of more than 5,000 km² of prospective uranium properties in Rio Negro and Chubut provinces of Argentina (see news release filed on SEDAR April 17, 2008). Currently, the Company has exclusive rights to over 400,000 hectares (or more than 4,000 km²) of properties in the two provinces. The exploration focus is on surficial (calcrete-type), as well as sandstone-type (roll front) uranium +/- vanadium targets. A brief description of the Company’s material projects follows.
**Amarillo Grande Project, Rio Negro Province**

**Location and Ownership:** The Amarillo Grande Project is located in central Rio Negro province, in the Patagonia region of southern Argentina. Blue Sky has the exclusive rights to over 300,000 hectares of mineral tenures that form the project. The main parts of the project are all road accessible from major centres, such as Valcheta or Neuquen, via the gravel Provincial Road 66. The area is flat-lying, semi-arid and accessible year-round, with nearby rail, power and port access.

**Geologic Potential:** The district-scale Amarillo Grande Project hosts mineralization with characteristics of both Surfacial and Sandstone-type uranium deposits, in some cases including significant vanadium. Most of the mineralized occurrences found within project area to date have the characteristics of Surfacial Uranium Deposits in which uranium occurs in sediments or soils of relatively young age (Tertiary to Recent), often in association with secondary carbonate minerals that form lenses or blankets of calcrete. Surfacial deposits typically form in semi-arid to arid uranium rich districts adjacent to uranium source rocks (granites or ash flow sequences) or primary uranium deposits. The main uranium mineral in these deposits is typically carnotite, a yellowish hydrated potassium uranium vanadium oxide, \( K_2(\text{UO}_2)_2(\text{VO}_4)_2\cdot 3\text{H}_2\text{O} \).

The Ivana deposit displays characteristics of both surficial-type and sandstone-type uranium-vanadium deposits. In plan view, the Ivana uranium-vanadium mineralization has a broad C-shaped pattern with some isolated outlying areas of peripheral mineralization. The uranium mineralization at Ivana is comprised of secondary uranium minerals which include carnotite, a coffinite-like mineral that has been called B-coffinite (beta-coffinite), as well as lesser tyuyamanite, leibigite, and an unidentified uranium-bearing mineral species.

The Amarillo Grande project is believed to have district-scale potential for discovery of similar styles of mineralization to the Ivana deposit.

**Exploration History Summary:** In 2007, under the supervision of consultant Dr. Jorge Berizzo, Blue Sky selected Rio Negro as a high-potential location for discovery of new uranium deposits. In the same year, a 14,689 line-km airborne radiometric survey led to discovery of surficial zones of uranium mineralization at the Anit and Santa Barbara groups of properties. A second large-scale airborne radiometric survey in 2010 led to the acquisition of the Ivana group of properties. Detailed exploration work through 2012 on the three property areas led to the delineation of a new uranium district along a 140-kilometre geologic trend. Significant zones of uranium mineralization have been identified along the trend, with the potential for expansion to depth and along strike. While the three properties were previously distinguished from each other in Company disclosure, their proximity, related geologic trend, and the likelihood of additional property acquisitions and zones of mineralization along the trend, has led the Company to group the entire package into a single project, the Amarillo Grande Project.

In 2016, improved market sentiment for uranium encouraged the Company to relaunch exploration at the project. The first program was designed to delineate mineralization across the district in greater detail and to identify extensions and new targets, both near surface and at depth. By the end of the year, a 15 line-pole-dipole electrical tomography (ET) survey was launched. Conductive anomalies interpreted as paleo-channels were identified on every line surveyed. On January 26th 2017, the Company announced the commencement of a Phase 1, reverse circulation (“RC”) drilling program at the Amarillo Grande project.

Drilling at Anit included 1,170 metres in 83 holes. The program successfully confirmed the spatial correlation of the previously recognized mineralized zones. Due to a new market interest in vanadium as a component of storage batteries for renewable energy and strength in traditional market as a steel hardening alloy, and the resulting significant price increase during the year, the exploration team made a detailed review of the vanadium results at Anit. A 3 x 1 kilometre area was delineated with thicknesses between 0 and 16 metres, using a 1,000 ppm \( V_2\text{O}_5 \) x 1 metre isocurve as a lower limit. This is a wider and thicker area than that of the uranium mineralized zone, and it is open to expansion (see News Release dated November 8, 2017).

At Santa Barbara, fifteen holes were drilled ranging from 4 to 25 metres length, for a total of 312 metres. This was the first drill program at this target area and was considered a scouting program. Values of uranium and vanadium were low in all holes; this target area represents the lowest priority for follow-up work.
At Ivana, the Phase I program included 158 holes totaling 2,250 metres. The results successfully outlined a strongly mineralized corridor of uranium-vanadium mineralization, including a higher-grade core zone, within approximately twenty metres of surface. A Phase II program was launched in September 2017, focused on the Ivana target, which included 11.5 kilometres of ET surveying in 4 lines using a 15 metre array. The follow-up Phase II drill program included 4,327 metres in 269 holes. The known mineralization at Ivana was expanded laterally, and thicker higher-grade mineralized intervals were intercepted in the core of the mineralized corridor.

Results from drilling are available in news releases and summarized in previous MDA’s, and can be found filed under the Company’s profile on SEDAR.

2018 Exploration: The final drill results for the Phase II program at Ivana were released on January 15, 2018, and the Company announced that it had engaged independent qualified persons to complete the first mineral resource estimate for the project and associated NI 43-101 Technical Report. On January 22, 2018 the Company reported the results of the first preliminary metallurgical test work on samples from Ivana. The metallurgical studies were completed on a single composite created from four samples with predominantly carnottite (a uranium-vanadium oxide) mineralization, the most common style of mineralization found at Amarillo Grande. The alkaline leach test results yielded recoveries of 95% for the uranium in 2 hours.

On March 5, 2018, the first mineral resource estimate for the Amarillo Grande Project was announced, focused specifically on the Ivana deposit. A supporting Technical Report was filed on SEDAR on April 18, 2018, prepared by Jon P. Thorson, PhD., CPG, Bruce M. Davis, FAusIMM, of BD Resource Consulting, Inc., and Susan Lomas, P.Geo., Lions Gate Geological Consulting Inc. (“the Authors”) who are independent Qualified Persons as set forth by National Instrument 43-101 (“NI 43-101”).

The Authors of the Technical report recommended that Blue Sky Uranium should proceed with a preliminary economic assessment (“PEA”) to better direct future project development, and should conduct additional drilling to define the limits of the Ivana deposit and identify satellite uranium-vanadium deposits nearby.

On May 9, 2018, Blue Sky announced that it had engaged Chuck Edwards, P. Eng., as a technical advisor to assist the Company in planning and managing beneficiation (upgrading) and metallurgical studies and process design for the Ivana Uranium-Vanadium deposit and the Amarillo Grande project as part of a PEA program. Mr. Edwards has been a Professional Engineer for 51 years, with experience in Research and Development, operations, government service, consulting and engineering management. Mr. Edwards specializes in uranium processing for both alkaline and acid leach plants, and was awarded the AIME gold medal for Extractive Metallurgy Technology in 1987, the CMP Best Presentation Award in 1997 and 2007, CMP Mineral Processor of the Year in 2001, CIM Distinguished Lecturer in 2003, CIM Fellowship in 2004, CIM Life Member in 2011, and CIM Distinguished Service Medal in 2013.

On May 23, 2018, Blue Sky announced that the initial process testing on oxide material from the Company’s Ivana uranium-vanadium deposit demonstrated that simple wet scrubbing followed by wet screening results in the upgrading of metal concentration by approximately 300% for Uranium and 250% for Vanadium with recoveries of 93% and 74%, respectively. The studies were completed on a single composite sample believed to contain primarily carnottite (a uranium-vanadium oxide) mineralization, which is the most common style of mineralization found at Amarillo Grande.

Coincident with the PEA work, Blue Sky continued exploring proximal to the Ivana deposit in order to identify new mineralized areas and expand resources. On August 1, 2018, the Company announced the completion of 425.5 metres of shallow auger drilling in 110 holes to test for extensions to the Ivana deposit. This work provided targets for a subsequent 1,063 metre step-out RC drill program around the Ivana deposit. Results from the RC program were announced on October 9, 2018, and confirmed that the Ivana deposit extends more than 1,000 metres to the south of the initial mineral resource area.

On November 14th, 2018 the Company announced the sample results for the first 39 pits from an on-going pit sampling program, which is testing new areas approximately one kilometre to the west of the Ivana mineral resource area. High grades of uranium and vanadium from channel samples collected along pit walls indicated the potential for the lateral extension of resources.
A second more detailed round of mineralogical, metallurgical and process design testwork on material from Ivana was completed at the Saskatchewan Research Council (“SRC”) under the guidance of Chuck Edwards. Results were announced on February 7th, 2019, and highlights included:

- Simple two-stage process of concentration/beneficiation followed by Alkaline Leaching using low environmental impact technology and reagents
- Stage 1 - approximately fourfold increase in the grades of uranium and vanadium, and recoveries of 89% for both elements from simple wet scrubbing and screening of raw mineralized material to produce a Leach Feed Concentrate with an approximately 77% mass reduction
- Stage 2 - recoveries of 95% for uranium and 60% for vanadium for Alkaline Leaching of Leach Feed Concentrate
- The optimized leaching process requires no added oxidants and no flotation
- Overall process recovery of 85% for uranium and 53% for vanadium

**Preliminary Economic Assessment and Resource Estimate:**
The first Preliminary Economic Assessment for the Amarillo Grande Project was announced on February 27, 2019. The PEA demonstrates robust economics for a surficial mining operation of the Ivana deposit, with 13 years of uranium and vanadium production.

PEA Highlights (All figures in US dollars)
- After-tax NPV8%: $135.2 million
- After-tax IRR: 29.3%
- After-tax Payback period: 2.4 years
- Pre-production Capital Cost: $128.05 million, includes $28.28 million contingency
- Life of mine (“LOM”) Sustaining Capital Cost: $35.46 million, includes $7.21 million contingency
- Average LOM Total Cash Cost net of credits: $16.24/lb U3O8
- Average LOM All-In Sustaining Costs (“AISC”) net of credits: $18.27/lb U3O8

PEA Key Assumptions & Inputs
- Uranium price: $50/lb U3O8
- Vanadium Price $15/lb V2O5
- Years of Construction: 2
- Years of Production: 13
- Strip Ratio: 1.1:1 (waste/ore)
- Dilution: 3%
- Peak Mining rate (waste + mill feed): 13,500 tonnes per day (“tpd”)
- Processing throughput: 6,400 tpd
- Process Plant Recoveries, Uranium: 84.6%
- Process Plant Recoveries, Vanadium: 52.5%
- Average Annual Production (LOM): 1.35 Mlbs/y U3O8
- LOM uranium production: 17.5 Mlbs U3O8

*The PEA is preliminary in nature and is based solely on Inferred Mineral Resources that are considered too speculative geologically to have economic considerations applied to them that would enable them to be categorized as Mineral Reserves. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability and there is no certainty that the PEA will be realized.*

An updated Mineral Resource Estimate, effective September 28th, 2018, was used for the PEA. The updated resource estimate includes data from an additional 61 reverse circulation (“RC”) drill holes (1,043 metres) completed in September of 2018, as well as a more extensive density study that indicated a density of 2.1 gr/cm3 should be applied. Those changes resulted in a 17% increase in total tonnes, as well as a 19% increase in contained U308 and a 13% increase in contained V205, at similar grades.

*The estimate of mineral resources may be materially affected by environmental, permitting, legal, title, taxation, sociopolitical, marketing, or other relevant issues. The quantity and grade of reported Inferred resources are uncertain in nature and there has been insufficient exploration to classify these inferred resources as Indicated or Measured, and it is uncertain if further exploration will result in upgrading them to an Indicated or Measured category.*
Table 2. Estimate of Inferred Mineral Resource reported at 100 ppm Uranium Cut-off

<table>

</tbody>
</table>

Notes to Table 1:
1. Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability.
2. It is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration.
3. The Mineral Resources in this estimate were not constrained within a conceptual pit shell owing to the shallow nature of the deposit (<25 m).
4. The 100 ppm uranium reporting cutoff grade is based on operative costs of $12/t, a price of $50/lb U₃O₈, and a process recovery of 90%. A density of 2.1gr/cm³ was applied.
5. The resource was estimated within distinct zones of elevated uranium concentration occurring within the host sediments. Vanadium is associated with uranium and is estimated within the same zones. There is no indication that Vanadium occurs outside of the elevated uranium zones in the Ivana deposit area in sufficient concentrations to justify developing estimation domains focused on Vanadium.

Infill drilling at the Ivana deposit is expected to upgrade the mineral resource from the Inferred category. There is also potential to expand resources at Ivana, particularly to the west, where recent pit sampling returned significant intervals with high grades of uranium and vanadium (see Blue Sky news release dated November 15, 2018).

Future work on Ivana will include additional infill and step-out drilling to upgrade and expand mineral resources, as well as advanced engineering studies that will include a complete and comprehensive environmental base line study, additional metallurgical and process design test work, mine design optimization, detailed permitting assessment, among other items.

The Mineral Resource Estimate was prepared under the direction of Bruce Davis Ph.D., F.AusIMM, of BD Resource Consulting Inc. and Susan Lomas, P.Geo., of Lions Gate Geological Consulting Inc. Both Dr. Davis and Ms. Lomas are independent Qualified Persons (QP’s) as defined in NI 43-101. The PEA and associated information was prepared under the direction of consultant Ken Kuchling, P.Eng., a mining engineer specializing in economic reviews and an independent Qualified Person as defined in NI 43-101. Additional contributing Qualified Persons for the PEA are: Jon Thorson, Ph.D., CPG. (geological interpretation); Chuck Edwards, P.Eng, FCIM (metallurgy & processing) and; Ken Embree, P.Eng., of Knight Piésold Ltd (waste & water management).

Supporting information for the PEA and Mineral Resource Estimate will be included in a NI 43-101 Technical Report to be published within 45 days of the press release.

Sierra Colonia Project, Chubut Province

Location and Ownership: The Company has exclusive rights to the more than 19,900-hectare Sierra Colonia group of properties. The project is located in the central part of the Chubut province. It is situated 96 km east-northeast of the Cerro Solo uranium project where the National Commission of Atomic Energy (“CNEA”) identified a historical resource of 15 million pounds of contained U₃O₈ in the same geological environment (CNEA web site with information dated June 5, 2009. The resource statement is not compliant with National Instrument 43-101).

Geologic Potential: The Sierra Colonia project was selected following recommendations by Dr. Jorge Berizzo, Blue Sky’s geological consultant, and was based on the proximity to CNEA’s Mirasol uranium occurrence and similarities to the geological setting at Mirasol and Cerro Solo. Uranium mineralization is hosted in sandstones, conglomerates and tuffs of Lower to Upper Cretaceous age of the Chubut Group located in an erosional window eroded through late Tertiary El Cuy plateau basalts. Petrified wood is commonly associated with uranium mineralization. Uranium mineralization is mainly in the form of carnitite and represents a sandstone-hosted model. However, the presence of carnitite indicates probable re-mobilization and, as a result, surficial deposits could be expected to be discovered in the vicinity due to the arid climate condition in the area.
**Exploration History Summary:** Initial exploration involved a surface radiometric survey covering 130 square kilometres that delineated a 14 kilometre northwest trending corridor with radiometric anomalies in 2011. The follow-up exploration program was focused on this corridor and included sampling of hand pits, ranging in depth from surface to 2 metres and collection of grab samples from outcrops. Results ranged from below detection limit to 0.20% U₃O₈ and 1.32% V₂O₅ for pit samples and to 0.65% U₃O₈ and 1.55% V₂O₅ for grab samples. Anomalous molybdenum also occurs ranging from below detection limit to 671 ppm molybdenum.

Work completed under joint venture with AREVA focused on identifying drill targets in 12 areas contained within the 14 kilometre-long mineralized trend discovered by Blue Sky in 2011. Two lines of IP / Resistivity were completed (totaling seven kilometres) along with detailed geological and topographic surveys. The program was successful in tracing the favourable stratigraphic units and defining drill targets.

**Current Exploration:** During the year ended December 31, 2017, the Company determined that it would not be exploring the Sierra Colonia property further in 2018 and impaired $32,702 in acquisition costs.

**Tierras Coloradas Project, Chubut Province**

The Company has exclusive rights to the 40,000 hectare Tierras Coloradas group of properties east of the Sierra Colonia property in the province of Chubut, Argentina. The project is situated east of the Sierra Colonia project, in a similar geologic environment.

**Geologic Potential:** Uranium mineralization has been found within a late Tertiary continental sequence named Punto Chico Formation. Uranium was observed related to logs and superficial calcrete. Therefore, two types of uranium deposit model are expected: sandstone and surficial types.

**Exploration History Summary:** Surficial mineralization was discovered by Blue Sky in 2011 while prospecting and carrying out surface radiometric surveys in the area of the property. The superficial radiometric anomalies are located within a similar geological environment as observed at the CNEA's Mirasol uranium occurrence which is located less than 100 kilometres to the east. Blue Sky completed a short exploration program in 2012 that included a ground radiometric survey, mapping and sampling. Ground radiometric anomalies ranged from background to 1,650 cps.

**Current Exploration:** The Company is currently evaluating strategic alternatives to advance the Tierras Coloradas Project.

**Cerro Parva Project, Chubut Province**

The Company has exclusive rights to the Cerro Parva project, including over 67,800 hectares of properties in the Province of Chubut, Argentina. The project is situated southeast of the Sierra Colonia project. BSK exploration efforts to date have included a prospecting program, ground radiometric surveying and mapping.

**Current Exploration:** The Company is currently evaluating strategic alternatives to advance the Cerro Parva Project.

(1) Variance from 2017 primarily driven by decrease in exploration of $1,189,926, partially offset by an increase stock-based compensation of $757,483, management fees and salaries and employee benefits of $80,270, and corporate development of $64,240.
(2) Variance from 2016 primarily driven by increase in exploration expense of $2,795,339 and an increase in corporate development and investor relations expense of $569,088.
(3) Variance from 2017 primarily driven by increase in cash of $550,716 and an increase in prepaid expenses of $30,021.
(4) Variance from 2016 primarily driven by decrease in cash of $735,921, partially offset by an increase in mineral property interests and prepaid expenses.

Results of Operations – For the years ended December 31, 2018 compared to the year ended December 31, 2017

Loss from operating activities

During the year ended December 31, 2018, loss from operating activities decreased by $271,055 to $4,566,344 compared to $4,837,399 for the year ended December 31, 2017. The increase in loss from operating activities is largely due to:

- A decrease of $1,189,926 in exploration expenditures. Exploration expenditures were $2,351,971 for the year ended December 31, 2018 compared to $3,541,897 for the year ended December 31, 2017. The Company completed its Phase 2 reverse circulation drilling program, incurred costs related to the NI 43-101 for the Amarillo Grande Project primarily focused on the Ivana area, as well as incurred assaying, metallurgy, and salaries and contractor’s expenses during the year ended December 31, 2018 compared to higher exploration expenditures due to the completion of Phase 1 and commencement of Phase 2 reverse circulation drilling at the Amarillo Grande Project during the year ended December 31, 2017.

The decrease was partially offset by:

- An increase of $757,483 in share-based compensation. Share-based compensation was $802,798 for the year ended December 31, 2018 compared to $45,315 for the year ended December 31, 2017. The increase is due to the granting and vesting of 4,520,000 stock options during the year ended December 31, 2018, compared to the granting and cancellation of 250,000 stock options during the year ended December 31, 2017.

- An increase of $80,270 in management fees and salaries and employee benefits. Management fees and salaries and employee benefits were $349,370 for the year ended December 31, 2018 compared to $269,100 for the year ended December 31, 2017. The increase is due to an increase in corporate activity resulting in a greater amount charged for its usage relating to Grosso Group’s costs during the year ended December 31, 2018 compared to the year ended December 31, 2017.

- An increase of $64,240 in corporate development and investor relations. Corporate development and investor relations were $761,418 for the year ended December 31, 2018 compared to $697,178 for the year ended December 31, 2017. The increase is due to a greater number of activities relating to promotion of the Company’s projects during the year ended December 31, 2018 compared to fewer activities relating to promotion of the Company’s projects during the year ended December 31, 2017.
Other Items

During the year ended December 31, 2018, other income decreased by $15,369 to $21,180 compared to $36,549 for the year ended December 31, 2017. The decrease in other income is largely due to:

- An increase of $39,719 in foreign exchange loss. Foreign exchange loss was $3,114 for year ended December 31, 2018 compared to a foreign exchange gain of $36,605 for the year ended December 31, 2017. The increase is due to the fluctuation in foreign exchange rates and differing amounts of foreign currencies held during the year ended December 31, 2018 compared to the year ended December 31, 2017.

- A decrease of $17,852 in reversal of impairment of mineral property interests. During the year ended December 31, 2017 company reversed impairment of the Ivana project due to resuming exploration activity on the project, which removed the impairment indicators.

The decrease was partially offset by:

- An increase of $17,900 in interest income. Interest income was $24,294 for the year ended December 31, 2018 compared to $6,394 for the year ended December 31, 2017. The increase is due to a greater amount of cash held during the year ended December 31, 2018 compared to the year ended December 31, 2017.

- A decrease of $32,702 in impairment of mineral property interests. Impairment of mineral property interests was $Nil for the year ended December 31, 2018 compared to $32,702 for the year ended December 31, 2017 due to discontinuation of exploration at the Sierra Colonia property.

The loss and comprehensive loss for the year ended December 31, 2018 was $4,545,164 or $0.05 per basic and diluted share compared to a net loss and comprehensive loss of $4,800,850 or $0.08 per basic and diluted share for the year ended December 31, 2017.

Cash Flow

Operating Activities

Cash outflow from operating activities was $4,236,187 for the year ended December 31, 2018 compared to $4,373,047 for the year ended December 31, 2017. The decrease in cash outflow results from lower exploration expenditures partially offset by higher corporate administrative costs and changes in non-cash working capital balances due to timing of receipt and payment of cash compared to the prior period.

Investing Activities

Cash outflow from investing activities was $4,934 for the for the year ended December 31, 2018 compared to $36,391 for the year ended December 31, 2017, as a result of lower expenditures on mineral property interests during the year ended December 31, 2018 compared to the year ended December 31, 2017.

Financing Activities

Cash inflow from financing activities was $4,791,837 for the year ended December 31, 2018 compared to $3,673,517 for the year ended December 31, 2017. Proceeds from the issuance of common shares and warrants net of share issue costs were $4,791,837 for the year ended December 31, 2018 compared to $1,098,977 for the year ended December 31, 2017. Proceeds from warrant exercises were $Nil for the year ended December 31, 2018 compared to $2,574,540 in warrant exercises for the year ended December 31, 2017.
Results of Operations – For the three months ended December 31, 2018 compared to the three months ended December 31, 2017

Loss from operating activities

During the three months ended December 31, 2018, loss from operating activities decreased by $887,531 to $685,126 compared to $1,572,657 for the three months ended December 31, 2017. The increase in loss from operating activities is largely due to:

- A decrease of $946,095 in exploration expenditures. Exploration expenditures were $368,924 for the three months ended December 31, 2018 compared to $1,315,019 for the three months ended December 31, 2017. The Company incurred costs related to the NI 43-101 for the Amarillo Grande Project primarily focused on the Ivana area, as well as incurred assaying, metallurgy, and salaries and contractor’s expenses during the three months ended December 31, 2018 compared to higher exploration expenditures, including the continuation of its Phase 2 drilling program, expanding the program to 4,500 metres from the initial 3,000 metres, as well as incurred assaying and salaries and contractor’s expense at the Ivana property during the three months ended December 31, 2017.

The decrease was partially offset by:

- An increase of $22,870 in management fees and salaries and employee benefits. Management fees and salaries and employee benefits were $90,870 for the three months ended December 31, 2018 compared to $68,000 for the three months ended December 31, 2017. The increase is due to an increase in corporate activity resulting in a greater amount charged for its usage relating to Grosso Group’s costs during the three months ended December 31, 2018 compared to the three months ended December 31, 2017.

- An increase of $22,378 in corporate development and investor relations. Corporate development and investor relations were $158,325 for the three months ended December 31, 2018 compared to $135,947 for the three months ended December 31, 2017. The increase is due to a greater number of activities relating to promotion of the Company’s projects during the three months ended December 31, 2018 compared to a fewer number of activities relating to promotion of the Company’s projects during the three months ended December 31, 2017.

Other Items

During the three months ended December 31, 2018, other expenses increased by $151,755 to $115,852 compared to other income of $35,903 for the three months ended December 31, 2017. The increase in other items is largely due to:

- An increase of $164,761 in foreign exchange loss. Foreign exchange loss was $124,432 for three months ended December 31, 2018 compared to a foreign exchange gain of $40,329 for the three months ended December 31, 2017. The increase is due to the fluctuation in foreign exchange rates and differing amounts of foreign currencies held during the three months ended December 31, 2018 compared to the three months ended December 31, 2017.

- A decrease of $17,852 in reversal of impairment of mineral property interests. During the three months ended December 31, 2017 company reversed impairment of the Ivana project due to resuming exploration activity on the project, which removed the impairment indicators.

The increase was partially offset by:

- A decrease of $32,702 in impairment of mineral property interests. Impairment of mineral property interests was $Nil for the three months ended December 31, 2018 compared to $32,702 for the three months ended December 31, 2017 due to discontinuation of exploration at the Sierra Colonia property.

The loss and comprehensive loss for the three months ended December 31, 2018 was $800,978 or $0.01 per basic and diluted share compared to a net loss and comprehensive loss of $1,536,754 or $0.02 per basic and diluted share for the three months ended December 31, 2017.
Balance Sheet

At December 31, 2018, the Company had total assets of $1,606,635 which is an increase of $579,459 from the $1,027,176 in total assets at December 31, 2017. The change is primarily due to an increase in cash of $550,716 and prepaid expenses of $30,021 during the year ended December 31, 2018.

(3) Variance from prior quarter primarily driven by decrease in share-based compensation of $802,798, exploration expenditures of $641,946, partially offset by increase in foreign exchange gain of $187,869.

(4) Variance from prior quarter primarily driven by increase in share-based compensation of $802,798, corporate development and investor relations of $78,267, partially offset by decrease in exploration expenditures of $394,831.

(5) Variance from prior quarter primarily driven by increase in exploration expenditures of $641,946, partially offset by increase in foreign exchange gain of $187,869.

Liquidity and Capital Resources

The Company has experienced recurring operating losses and has an accumulated deficit of $34,598,770 and shareholders’ equity of $1,463,014 at December 31, 2018. In addition, the Company has working capital of $1,403,864 at December 31, 2018 and negative cash flow from operating activities of $4,236,187. Working capital is defined as current assets less current liabilities and provides a measure of the Company’s ability to settle liabilities that are due within one year with assets that are also expected to be converted into cash within one year. These factors create material uncertainties that may cast significant doubt about the Company’s ability to continue as a going concern. The Company’s continued operations, as intended, are dependent upon its ability to raise additional funding to meet its obligations and commitments (as disclosed in Note 1 of the Company’s audited consolidated financial statements for the year ended December 31, 2018) and to attain profitable operations. Management’s plan in this regard is to raise equity financing as required. There are no assurances that the Company will be successful in achieving these goals.

The Company’s audited consolidated financial statements for the year ended December 31, 2018 do not include adjustments to the amounts and classifications of assets and liabilities and reported expenses that might be necessary should the Company be unable to continue as a going concern, which would be material.

The audited consolidated financial statements for the year ended December 31, 2018 have been prepared in accordance with International Financial Reporting Standards (“IFRS”) applicable to a going concern, which assume that the Company will realize its assets and discharge its liabilities in the normal course of business for the foreseeable future. The Company’s cash position at December 31, 2018 was $742,363 and working capital was $109,788,717, which created a substantial amount of financial flexibility to support the Company’s operations.

Capital Stock

The Company’s authorized share capital comprises an unlimited number of common shares. The common shares do not have a par value.

As at December 31, 2018, an aggregate of 109,788,717 common shares were issued and outstanding. As at the date of this report, 109,788,717 common shares were issued and outstanding.
Details of Issues of Common Shares in 2018

On June 12, 2018, the Company closed a non-brokered private placement financing of 24,906,588 units at a price of $0.14 per unit for gross proceeds of $3,486,922. Each unit consists of one common share and one transferable common share purchase warrant. Each warrant entitles the holder to purchase one additional common share of the Company at $0.30 per share for two years from the date of issue, expiring on June 11, 2020. Finders’ fees were paid of $132,260 cash and 944,709 non-transferable warrants exercisable into common shares at $0.30 for two years from the date of issue. Fair value was calculated using the Black-Scholes pricing model and the following variables: risk-free interest rate – 1.89%; expected stock price volatility – 109.97%; dividend yield – 0%; and expected warrant life – 1.014 years.

On March 1, 2018, the Company closed a non-brokered private placement financing of 7,258,500 units at a price of $0.20 per unit for gross proceeds of $1,451,700. Each unit consists of one common share and one transferable common share purchase warrant. Each warrant entitles the holder to purchase one additional common share of the Company at $0.35 per share for two years from the date of issue, expiring on February 28, 2020. The Company is entitled to accelerate the expiry date of the warrants if the five-day volume weighted average stock price of the Company trades $0.75 or higher, then, on notice from the Company, the warrant holders will have 20 days to exercise their warrants; otherwise, the warrants will expire on the 21st day after the date of delivery of the notice. Finders’ fees were paid of $14,525 cash and 72,625 non-transferable warrants exercisable into common shares at $0.35 for two years from the date of issue subject to the accelerated exercise provisions as set out above. Fair value was calculated using the Black-Scholes pricing model and the following variables: risk-free interest rate – 1.71%; expected stock price volatility – 112.85%; dividend yield – 0%; and expected warrant life – 0.98 years.

Details of Issues of Common Shares in 2017

On December 19, 2017, the Company closed a non-brokered private placement financing of 5,940,064 units at a price of $0.19 per unit for gross proceeds of $1,128,613. Each unit consists of one common share and one transferable common share purchase warrant. Each warrant entitles the holder to purchase one additional common share of the Company at $0.30 per share for one year from the date of issue, expiring on December 19, 2019. The Company is entitled to accelerate the expiry date of the warrants if the 5-day volume weighted average stock price of the Company trades $0.50 or higher, then, on notice from the Company, the warrant holders will have 20 days to exercise their warrants; otherwise, the warrants will expire on the 21st day after the date of delivery of the notice. Finders’ fees were paid of $29,636 in cash and 155,978 non-transferable warrants exercisable into common shares at $0.30 for one year from the date of issue subject to the accelerated exercise provisions as set out above. Fair value was calculated using the Black-Scholes pricing model and the following variables: risk-free interest rate – 1.58%; expected stock price volatility – 115.30%; dividend yield – 0%; and expected warrant life – 0.96 years.

During the year ended December 31, 2017, 25,745,400 warrants were exercised for gross proceeds of $2,574,540.

4,180,966 warrants that set to expire on September 19, 2018 were extended to September 19, 2019 during the year ended December 31, 2018. These warrants were originally issued on September 19, 2016 as part of the units issued under a private placement completed by the Company on September 2016 and are also subject to an accelerator. The exercise price of the warrants remains at $0.50.
5,940,064 warrants that were set to expire on December 19, 2018 were extended to December 19, 2020 during the year ended December 31, 2018. These warrants were originally issued on December 19, 2017 as part of the units issued under a private placement completed by the Company on December 19, 2017 and are also subject to an accelerator. The exercise price of the warrants remains at $0.30.

Commitment

Management Services Agreement

Grosso Group provides its member companies with administrative and management services. The member companies pay monthly fees to Grosso Group on a cost recovery basis. The fee is based upon a pro-rating of Grosso Group’s costs including its staff and overhead costs among the member companies. The current fee is $17,000 per month. This fee is reviewed and adjusted quarterly based on the level of services required.

The table below represents the Company’s aggregate commitment to Grosso Group over the term of the Management Services Agreement.

Off-Balance Sheet Arrangements

The Company does not utilize off-balance sheet arrangements.

Related Party Transactions

Grosso Group Management Ltd.

On April 1, 2010, the Company entered into a Management Services Agreement (“Agreement”) with Grosso Group Management Ltd. (Grosso Group) to provide services and facilities to the Company. Grosso Group provides its member companies with administrative and management services. The member companies pay monthly fees to Grosso Group on a cost recovery basis. The fee is based upon a pro-rating of Grosso Group’s costs including its staff and overhead costs among the member companies. The fee is reviewed and adjusted quarterly based on the level of services required. The Agreement expired on December 31, 2018 and was automatically renewed for a period of two years pursuant to the terms of the Agreement.

The Agreement contains termination and early termination fees in the event the services are terminated by the Company. The termination fee includes three months of compensation and any contractual obligations that Grosso Group undertook for the Company, up to a maximum of $750,000. The early termination fees are the aggregate of the termination fee in addition to the lesser of the monthly fees calculated to the end of the term and the monthly fees calculated for eighteen months, up to a maximum of $1,000,000.

Critical Accounting Estimates and Recent Accounting Pronouncements

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amount of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the period. Actual results may differ from these estimates.

Reference should be made to the Company’s significant accounting policies contained in Note 2 of the Company’s consolidated financial statements for the year ended December 31, 2018. These accounting policies can have a significant impact on the financial performance and financial position of the Company.

Changes in Accounting Standards

The Company completed a detailed assessment of its financial assets and liabilities as at January 1, 2018. The following table shows the original classification under IAS 39 and the new classification under IFRS 9:

<table>
<thead>
<tr>
<th>Financial assets/liabilities</th>
<th>Original classification IAS 39</th>

<td>Amortized cost</td>
<td>Amortized cost</td>
</tr>
</tbody>
</table>

The Company did not restate prior periods as it recognized the effects of retrospective application to shareholders’ equity at the beginning of the 2018 annual reporting period, which also includes the date of initial application. The adoption of IFRS 9 resulted in no impact to the opening accumulated deficit nor the opening balance of accumulated comprehensive income on January 1, 2018.
The Company has also adopted these accounting standards effective January 1, 2018. The adoption of these accounting standards had no significant impact on the consolidated financial statements. These standards are:

- IFRS 15 – Revenue from Contracts with Customers
- IFRIC 22 – Foreign Currency Transactions and Advance Consideration
- Amendments to IFRS 2 – Share-based Payments

**New Accounting Standards and Interpretations**

The International Accounting Standards Board (“IASB”) has issued new and amended standards and interpretations which have not yet been adopted by the Company. The following is a brief summary of the new and amended standards and interpretations:

IFRS 16 – Leases

IFRS 16 specifies how an IFRS reporter will recognize, measure, present and disclose leases. The standard provides a single lessee accounting model, requiring lessees to recognize assets and liabilities for all leases unless the lease term is 12 months or less or the underlying asset has a low value. Lessors continue to classify leases as operating or finance, with IFRS 16’s approach to lessor accounting substantially unchanged from its predecessor, IAS 17. The standard was issued in January 2016 and is effective for annual periods beginning on or after January 1, 2019. IFRS 16 is not expected to have a material impact on amounts recorded in the financial statements of the Company.

**Financial Instruments**

The Company thoroughly examines the various financial instrument risks to which it is exposed and assesses the impact and likelihood of those risks. These risks may include credit risk, liquidity risk, currency risk, and interest rate risk.

**Credit risk**

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss. Financial instruments that potentially subject the Company to credit risk consist of cash and accounts receivable. The Company has reduced its credit risk by depositing its cash and short-term investments with financial institutions that operate globally. Therefore, the Company is not exposed to significant credit risk and overall the Company’s credit risk has not changed significantly from the prior year.

**Liquidity risk**

Liquidity risk is the risk that the company will not be able to meet its financial obligations as they fall due. The Company has in place a planning and budgeting process to help determine the funds required to ensure the Company has the appropriate liquidity to meet its operating and growth objectives. The Company has historically relied on issuance of shares and warrants to fund exploration programs and may require doing so again in the future.

**Market risk**

**(i) Currency risk**

Financial instruments that impact the Company’s net earnings or other comprehensive income due to currency fluctuations include: cash, accounts receivable and accounts payable all denominated in United States dollars and Argentinean pesos. A 10% change in US dollar and the Argentinean peso exchange rates relative to Canadian dollar would have insignificant impact on the Company’s net and comprehensive loss:

- A 10% change in the US dollar exchange rate relative to the Canadian dollar would change the Company’s net loss by approximately $400.
- A 10% change in the Argentinean peso exchange rate relative to the Canadian dollar would change the Company’s net loss by approximately $1,900.
(ii) Interest rate risk

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate due to changes in market interest rates. The fair value of cash approximates its carrying values due to the immediate or short-term maturity of this financial instrument. Other current financial assets and liabilities are not exposed to interest rate risk because they are non-interest bearing or have prescribed interest rates.

Capital Management

The Company’s objectives of capital management are intended to safeguard the entity's ability to support the Company’s normal operating requirements on an ongoing basis, continue the development and exploration of its mineral properties and support any expansionary plans. The capital structure of the Company consists of equity attributable to common shareholders, comprised of issued capital, reserves and deficit. The Company manages the capital structure and makes adjustments in light of changes in economic conditions and the risk characteristics of the Company’s assets.

To effectively manage the entity’s capital requirements, the Company has in place a planning and budgeting process to help determine the funds required to ensure the Company has the appropriate liquidity to meet its operating and growth objectives. The Company has historically relied on issuance of shares to develop its mineral projects and may require doing so again in the future. The Company is monitoring market conditions to secure funding at the lowest cost of capital. The Company is exposed to various funding and market risks which could curtail its access to funds. The Company is not subject to any external covenants. There were no changes in the Company’s approach to capital management during the year ended December 31, 2018.

Risk Factors and Uncertainties

The Company’s operations and results are subject to a number of different risks at any given time. These factors, include but are not limited to disclosure regarding exploration, additional financing, project delay, titles to properties, price fluctuations and share price volatility, operating hazards, insurable risks and limitations of insurance, management, foreign country and regulatory requirements, currency fluctuations and environmental regulations risks. Exploration for mineral resources involves a high degree of risk. The cost of conducting programs may be substantial and the likelihood of success is difficult to assess. A number of the risks and uncertainties are discussed below:

History of losses: The Company has historically incurred losses as evidenced by its consolidated financial statements for the year ended December 31, 2018 and 2017. The Company has financed its operations principally through the sale of its equity securities. The Company does not anticipate that it will earn any revenue from its operations until its properties are placed into production, if ever. If the Company is unable to place its properties into production, the Company may never realize revenues from operations, will continue to incur losses and you may lose the value of your investment.

Joint ventures and other partnerships: The Company may seek joint venture partners to provide funding for further work on any or all of its other properties. Joint ventures may involve significant risks and the Company may lose any investment it makes in a joint venture. Any investments, strategic alliances or related efforts are accompanied by risks such as:

1. the difficulty of identifying appropriate joint venture partners or opportunities;
2. the time the Company’s senior management must spend negotiating agreements, and monitoring joint venture activities;
3. the possibility that the Company may not be able to reach agreement on definitive agreements, with potential joint venture partners;
4. potential regulatory issues applicable to the mineral exploration business;
5. the investment of the Company’s capital or properties and the loss of control over the return of the Company’s capital or assets;
6. the inability of management to capitalize on the growth opportunities presented by joint ventures; and
7. the insolvency of any joint venture partner.

There are no assurances that the Company would be successful in overcoming these risks or any other problems encountered with joint ventures, strategic alliances or related efforts.
Unexpected delays: The Company’s minerals business will be subject to the risk of unanticipated delays including permitting its contemplated projects. Such delays may be caused by fluctuations in commodity prices, mining risks, difficulty in arranging needed financing, unanticipated permitting requirements or legal obstruction in the permitting process by project opponents. In addition to adding to project capital costs (and possibly operating costs), such delays, if protracted, could result in a write-off of all or a portion of the carrying value of the delayed project.

Potential conflicts of interest: Several of the Company’s directors are also directors, officers or shareholders of other companies. Such associations may give rise to conflicts of interest from time to time. Such a conflict poses the risk that the Company may enter into a transaction on terms which could place the Company in a worse position than if no conflict existed. The directors of the Company are required by law to act honestly and in good faith with a view to the best interest of the Company and to disclose any interest which they may have in any project or opportunity of the Company. However, each director has a similar obligation to other companies for which such director serves as an officer or director. The Company has no specific internal policy governing conflicts of interest.

Competition with larger, better capitalized competitors: The mining industry is competitive in all of its phases. The Company faces strong competition from other mining companies in connection with the acquisition of properties producing, or capable of producing, base and precious metals. Many of these companies have greater financial resources, operational experience and technical capabilities than the Company. As a result of this competition, the Company may be unable to maintain or acquire attractive mining properties on terms it considers acceptable or at all. Consequently, the Company’s revenues, operations and financial condition could be materially adversely affected.

The Company does not intend to pay dividends: The Company has not paid out any cash dividends to date and has no plans to do so in the immediate future. As a result, an investor’s return on investment will be solely determined by his or her ability to sell common shares in the secondary market.

Title Risk: Although the Company has taken steps to verify title to mineral properties in which it has an interest, these procedures do not guarantee the Company’s title. Such properties may be subject to prior agreements or transfers and title may be affected by undetected defects.

Price Risk: The Company is exposed to price risk with respect to commodity and equity prices. Equity price risk is defined as the potential adverse impact on the Company’s earnings due to movements in individual equity prices or general movements in the level of the stock market. Commodity price risk is defined as the potential adverse impact on earnings and economic value due to commodity price movements and volatilities. The Company’s property has exposure to predominantly uranium. The prices of these metals, especially uranium, greatly affect the value of the Company and the potential value of its property and investments.

Financial Markets: The Company is dependent on the equity markets as its sole source of operating working capital and the Company’s capital resources are largely determined by the strength of the junior resource markets and by the status of the Company’s projects in relation to these markets, and its ability to compete for the investor support of its projects.

Political Risk: Exploration is presently carried out in the Argentina and is currently being reviewed worldwide. This exposes the Company to risks that may not otherwise be experienced if all operations were domestic. Political risks may adversely affect the Company’s potential projects and operations. Real and perceived political risk in some countries may also affect the Company’s ability to finance exploration programs and attract joint venture partners, and future mine development opportunities.

Credit Risk: Credit risk is the risk of an unexpected loss of a third party to a financial instrument fails to meet its contractual obligations. The Company is subject to credit risk on cash. The Company limits its exposure to credit loss by placing its cash with major financial institutions.

Liquidity Risk: Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they are due. The Company ensures that there is sufficient capital in order to meet short-term business requirements, after taking into account the Company’s holdings of cash. The Company raises capital through equity issues and its ability to do so is dependent on a number of factors including market acceptance, stock price and exploration results. The Company’s cash is invested in bank accounts.

Interest Risk: The Company’s bank accounts do not earn interest income. Cash bears no interest. The fair value of cash approximates its carrying values due to the immediate or short-term maturity of this financial instrument.
\[\text{Currency Risk:}\] Business is transacted by the Company in a number of currencies. Fluctuations in exchange rates may have a significant effect on the cash flows of the Company. Future changes in exchange rates could materially affect the Company’s results in either a positive or negative direction.

\[\text{Community Risk:}\] The Company has negotiated with the local communities on its mineral property concessions for access to facilitate the completion of geological studies and exploration work programs. The Company’s operations could be significantly disrupted or suspended by activities such as protests or blockades that may be undertaken by such certain groups or individuals within the community.

\[\text{Environmental Risk:}\] The Company seeks to operate within environmental protection standards that meet or exceed existing requirements in the countries in which the Company operates. Present or future laws and regulations, however, may affect the Company’s operations. Future environmental costs may increase due to changing requirements or costs associated with exploration and the developing, operating and closing of mines. Programs may also be delayed or prohibited in some areas. Although minimal at this time, site restoration costs are a component of exploration expenses.

**Disclosure Controls and Procedures and Internal Control over Financial Reporting**

On November 23, 2007, the British Columbia Securities Commission exempted Venture Issuers from the requirement to certify disclosure controls and procedures, as well as, Internal Controls over Financial Reporting as of December 31, 2007, and thereafter. The Company is a Venture Issuer; therefore it files the venture issuer basic certificates. The Company makes no assessment relating to establishment and maintenance of disclosure controls and procedures as defined under National Instrument 52-109 as at December 31, 2018.
