

# **BLUE SKY URANIUM CORP.**

## **MANAGEMENT'S DISCUSSION AND ANALYSIS FOR THE NINE MONTHS ENDED SEPTEMBER 30, 2024 AND 2023**

### **Background**

This Management's Discussion and Analysis ("MD&A") should be read in conjunction with the condensed consolidated interim financial statements of Blue Sky Uranium Corp. ("Blue Sky" or "the Company") for the nine months ended September 30, 2024 and 2023 and related notes thereto which have been prepared in accordance with IFRS Accounting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB"). All figures are in Canadian dollars unless otherwise noted. This MD&A has been prepared as of November 27, 2024.

### **Company Overview**

The Company was incorporated under the Business Corporations Act (British Columbia) on November 30, 2005 as Mulligan Capital Corp. On May 18, 2006, the Company received final receipts for a prospectus and became a reporting issuer in British Columbia and Alberta. On June 27, 2006 the Company completed its initial public offering (the "Offering") and on June 28, 2006 the Company listed its common shares on the TSX Venture Exchange (the "TSX-V") as a capital pool company. On February 7, 2007, the Company completed its qualifying transaction (the "QT") and was upgraded to Tier II status on the TSX-V. The Company also changed its name to Blue Sky Uranium Corp. to reflect its business as a junior uranium exploration company. The address of the Company's registered office is Suite 411 – 837 West Hastings Street, Vancouver, BC, Canada V6C 3N6.

The Company is a junior mineral exploration company engaged in the business of acquiring, exploring and evaluating natural resource properties and either joint venturing or developing these properties further or disposing of them when the evaluation is completed. The Company's material mineral properties of interest are all located in Argentina. Blue Sky is one of the Argentina's leading uranium exploration companies with more than 4,000 km<sup>2</sup> of tenements. Argentina has an advanced nuclear industry, centred in the Rio Negro Province. As of the date of this report, the Company has not earned any production revenue, nor defined any mineral reserves on any of its properties.

David Terry, PhD., P.Geo. is a member of the Board and is a Qualified Person as defined by NI 43-101 and has reviewed and approved the exploration information and technical disclosure contained in this MD&A. The Company has Quality Assurance/Quality Control protocols in place for all sampling programs as part of all auguring, geochemical sampling, sample preparation, sample shipping and sample analysis and compilation procedures.

### ***Outlook***

Argentina is the largest generator of electricity from nuclear energy in South America, with its advanced nuclear industry centred in Rio Negro Province. The country is working to further expand its nuclear energy sector with additional power plants, but lacks a ready internal supply of uranium. Blue Sky's goal is to acquire, explore and advance towards production a portfolio of projects with an emphasis on near-surface uranium deposits that have the potential for near-term low-cost production to service the Argentine domestic nuclear industry.

### **PRINCIPAL PROPERTIES**

In 2008, the Company gained control of a large land package of prospective uranium properties in Rio Negro and Chubut provinces of Argentina (see news release filed on SEDAR+ dated April 17, 2008). The Chubut properties have been maintained and are available for option but are currently considered non-material with no work programs planned. On June 17, 2024, the Company announced additional property acquisitions in Mendoza and Neuquén provinces. The portfolio now includes over 480,000 hectares (4,800 km<sup>2</sup>) of tenures in four provinces. The exploration focus is on surficial (calcrete-type), as well as sandstone-type (roll front) uranium +/- vanadium targets. A description of the Company's material projects follows.

## **Amarillo Grande Project, Rio Negro Province**

**Location and Ownership:** The Amarillo Grande Project is located in central Rio Negro province, in the Patagonia region of southern Argentina. Blue Sky has the rights to over 245,000 hectares of mineral tenures that form the project.

The main parts of the project are all road accessible from major centres, such as Valcheta or Neuquen, via the gravel Provincial Road 66. The area is flat-lying, semi-arid and accessible year-round, with nearby rail, power and port access.

**Proposed Transaction:** Effective June 6, 2024, the Company entered into a binding term sheet with Corredor Americano S.A. (“COAM”), an Argentine company of the Corporación América Group, to complete an option agreement (the “Proposed Transaction”) in respect to the Company’s Ivana Uranium-Vanadium Deposit (“Ivana” or the “Deposit”). COAM is a subsidiary of Corporación América International sàrl, ultimate parent company of the Corporación América Group. The Corporación América Group ([www.corporacionamerica.com](http://www.corporacionamerica.com)) is a conglomerate with diversified investments across Latin America and Europe, with significant stakes in the energy ([www.cgc.energy](http://www.cgc.energy)), airport ([www.caap.aero](http://www.caap.aero)), agribusiness, services, infrastructure, transportation and technology sectors.

The Proposed Transaction will see the Deposit brought to completion of the feasibility phase in exchange for a 50% interest in the Deposit. This includes expenditures of up to US\$35,000,000, and exploration and drilling of key exploration targets located in adjacent areas. The Company has incorporated Ivana Minerales S.A. in Argentina to serve as a joint venture company (“JVCO”) for the Proposed Transaction that will be governed by a shareholders’ agreement. If COAM proceeds with taking the Deposit to production, the Company will receive a free carry on the estimated capital costs in exchange for COAM earning an additional 30% interest in JVCO resulting in COAM holding an 80% interest and the Company holding a 20% interest in JVCO.

Under the Proposed Transaction, the Company and JVCO will enter into a call option agreement which, among other things, will provide JVCO with the right to conduct exploration and drilling activities on certain prospective areas and exploration targets (the “Exploration Targets”) and a five year option to acquire the Exploration Targets (the “Call Option”) at a price determined by reference to the amount and type of resources and reserves in respect of such properties at the time of exercise of the Call Option, as verified by a technical report prepared in accordance with National Instrument 43-101 – *Standards for Disclosure for Mineral Projects*.

Other areas of the Amarillo Grande Project outside of the Deposit will remain under 100% control of Blue Sky.

The parties agreed to a period of 90 days to negotiate in good faith definitive agreements (the “Definitive Agreements”) in connection with the Proposed Transaction. As of the date of this report, although the 90 day period has passed, both companies were continuing to advance the transaction towards the conclusion of due diligence and finalization of the definitive agreement. The obligations to enter into Definitive Agreements remains subject to various conditions, including but not limited to, COAM completing its due diligence and the parties having agreed on the final forms of Definitive Agreements. Accordingly, there can be no assurance that the Definitive Agreements will be entered into nor that the Proposed Transaction will be completed on the terms described above or at all. Completion of the Proposed Transaction will be subject to the terms and conditions of the Definitive Agreements, including obtaining the approval of the TSX-V and the Company’s shareholder approval.

**Geologic Potential:** The district-scale Amarillo Grande Project hosts mineralization with characteristics of both Surficial and Sandstone-type uranium deposits, in some cases including significant vanadium. Most of the mineralized occurrences found within project area to date have the characteristics of Surficial Uranium Deposits in which uranium occurs in sediments or soils of relatively young age (Tertiary to Recent), often in association with secondary carbonate minerals that form lenses or blankets of calcrete. Surficial deposits typically form in semi-arid to arid uranium rich districts adjacent to uranium source rocks (granites or ash flow sequences) or primary uranium deposits. The main uranium mineral in these deposits is typically carnotite, a yellowish hydrated potassium uranium vanadium oxide,  $K_2(UO_2)_2(VO_4)_2 \cdot 3H_2O$ .

The Ivana deposit displays characteristics of both surficial-type and sandstone-type uranium-vanadium deposits. In plan view, the Ivana uranium-vanadium mineralization has a broad C-shaped pattern with some isolated outlying areas of peripheral mineralization. The uranium mineralization at Ivana is comprised of secondary uranium minerals which include carnotite, a coffinite-like mineral that has been called  $\beta$ -coffinite (beta-coffinite), as well as lesser tyuyamunite, leibigite, and an unidentified uranium-bearing mineral species.

The Amarillo Grande project is believed to have district-scale potential for discovery of similar styles of mineralization to the Ivana deposit.

**Exploration History Summary:** In 2007, under the supervision of consultant Dr. Jorge Berizzo, Blue Sky selected Rio Negro as a high-potential location for discovery of new uranium deposits. In the same year, a 14,689 line-km airborne radiometric survey led to discovery of surficial zones of uranium mineralization at the Anit and Santa Barbara groups of properties. A second large-scale airborne radiometric survey in 2010 led to the acquisition of the Ivana group of properties. Detailed exploration work through 2012 on the three property areas led to the delineation of a new uranium district along a 140-kilometre geologic trend. Significant zones of uranium mineralization have been identified along the trend, with the potential for expansion to depth and along strike. While the three properties were previously distinguished from each other in Company disclosure, their proximity, related geologic trend, and the likelihood of additional property acquisitions and zones of mineralization along the trend, has led the Company to group the entire package into a single project, the Amarillo Grande Project.

In 2016, improved market sentiment for uranium encouraged the Company to relaunch exploration at the project. The first program was designed to delineate mineralization across the district in greater detail and to identify extensions and new targets, both near surface and at depth. By the end of the year, a 15 line- pole-dipole electrical tomography (ET) survey was launched. Conductive anomalies interpreted as paleo-channels were identified on every line surveyed. On January 26<sup>th</sup> 2017, the Company announced the commencement of a Phase 1, reverse circulation (“RC”) drilling program at the Amarillo Grande project.

Drilling at Anit included 1,170 metres in 83 holes. The program successfully confirmed the spatial correlation of the previously recognized mineralized zones. Due to a new market interest in vanadium as a component of storage batteries for renewable energy and strength in traditional market as a steel hardening alloy, and the resulting significant price increase during the year, the exploration team made a detailed review of the vanadium results at Anit. A 3 x 1 kilometre area was delineated with thicknesses between 0 and 16 metres, using a 1,000 ppm V<sub>2</sub>O<sub>5</sub> x 1 metre isocurve as a lower limit. This is a wider and thicker area than that of the uranium mineralized zone, and it is open to expansion (see News Release dated November 8, 2017).

At Santa Barbara, fifteen holes were drilled ranging from 4 to 25 metres length, for a total of 312 metres. This was the first drill program at this target area and was considered a scouting program. Values of uranium and vanadium were low in all holes; this target area represents the lowest priority for follow-up work.

At Ivana, the Phase I program included 158 holes totaling 2,250 metres. The results successfully outlined a strongly mineralized corridor of uranium-vanadium mineralization, including a higher-grade core zone, within approximately twenty metres of surface. A Phase II program was launched in September 2017, focused on the Ivana target, which included 11.5 kilometres of ET surveying in 4 lines using a 15 metre array. The follow-up Phase II drill program included 4,327 metres in 269 holes. The known mineralization at Ivana was expanded laterally, and thicker higher-grade mineralized intervals were intercepted in the core of the mineralized corridor.

Results from drilling are available in news releases and summarized in previous MD&A’s, and can be found filed under the Company’s profile on SEDAR+.

The final drill results for the Phase II program at Ivana were released on January 15, 2018, and the Company announced that it had engaged independent qualified persons to complete the first mineral resource estimate for the project and associated NI 43-101 Technical Report. On January 22, 2018, the Company reported the results of the first preliminary metallurgical test work on samples from Ivana. The metallurgical studies were completed on a single composite created from four samples with predominantly carnotite (a uranium-vanadium oxide) mineralization, the most common style of mineralization found at Amarillo Grande. The alkaline leach test results yielded recoveries of 95% for the uranium in 2 hours.

On March 5, 2018, the first mineral resource estimate for the Amarillo Grande Project was announced, focused specifically on the Ivana deposit. A supporting Technical Report was filed on SEDAR+ on April 18, 2018, prepared by Jon P. Thorson, PhD., CPG, Bruce M. Davis, FAusIMM, of BD Resource Consulting, Inc., and Susan Lomas, P.Geo., Lions Gate Geological Consulting Inc. (“the Authors”) who are independent Qualified Persons as set forth by National Instrument 43-101 (“NI 43-101”).

The Authors of the Technical report recommended that Blue Sky Uranium should proceed with a preliminary economic assessment (“PEA”) to better direct future project development, and should conduct additional drilling to define the limits of the Ivana deposit and identify satellite uranium-vanadium deposits nearby.

Coincident with the PEA work, Blue Sky continued exploring proximal to the Ivana deposit in order to identify new mineralized areas and expand resources. On August 1, 2018, the Company announced the completion of 425.5 metres of shallow auger drilling in 110 holes to test for extensions to the Ivana deposit. This work provided targets for a subsequent 1,063 metre step-out RC drill program around the Ivana deposit. Results from the RC program were announced on October 9, 2018, and confirmed that the Ivana deposit extends more than 1,000 metres to the south of the initial mineral resource area.

On November 14, 2018, the Company announced the sample results for the first 39 pits from a 115-pit sampling program testing new areas to the west and southwest of the Ivana mineral resource area. High grades of uranium and vanadium from channel samples collected along pit walls indicated the potential for the lateral extension of resources.

### ***2019 PEA Program***

A second more detailed round of mineralogical, metallurgical and process design testwork on material from Ivana was completed at the Saskatchewan Research Council (“SRC”) under the guidance of independent consultant Chuck Edwards. Results were announced on February 7, 2019 and were incorporated into the PEA study.

The results of the first Preliminary Economic Assessment for the Amarillo Grande Project were announced on February 27, 2019. The PEA provides an initial view of the potential viability of the resources for a surficial mining operation of the Ivana deposit, with 13 years of uranium and vanadium production. Recovery of uranium and vanadium is through a simple two-stage process of concentration/beneficiation followed by alkaline leaching using low environmental impact technology and reagents.

An updated Mineral Resource Estimate, effective September 28, 2018, was used for the PEA. The updated resource estimate included data from an additional 61 reverse circulation drill holes (1,043 metres) completed in September of 2018, as well as a more extensive density study that indicated a density of 2.1 gr/cm<sup>3</sup> should be applied. Supporting information for the PEA and Mineral Resource Estimate was included in a NI 43-101 Technical Report filed on SEDAR+ dated June 28, 2019.

Recommendations in the PEA for future work on the Ivana deposit included additional infill and step-out drilling to upgrade and expand mineral resources, advanced engineering studies including a complete and comprehensive environmental base line study, additional metallurgical and process design test work, mine design optimization, detailed permitting assessment, among other items.

### ***2019 Exploration***

Following the release of the PEA, the 2019 exploration program focused on identifying additional mineralization proximal to the Ivana deposit. Three target areas were pursued: Ivana West, Ivana Central and Ivana North. The program included auger drilling at all three targets, and induced polarization (“IP”) geophysical surveying in the Central and North areas, in order to delineate RC drilling targets. Ongoing results were announced in News Releases dated April 29<sup>th</sup>, 2019, May 16<sup>th</sup>, 2019, September 19<sup>th</sup>, 2019 and December 4<sup>th</sup>, 2019.

The Ivana West target area was located immediately west and southwest of the Ivana deposit. High grades of uranium-vanadium were encountered in two grids of pit samples. Mineralization defined by the northern pit sampling grid is interpreted to be the western extension of the northwestern domain of the current Ivana mineral resource, separated by an area of outcropping basement.

The Ivana Central target is located 10 kilometres north of the Ivana deposit, within the 145 km prospective trend at the AGP. Results from the 2019 IP survey and auger sampling identified near-surface mineralization as well as geophysical, geological and alteration patterns comparable with those associated with the Company’s Ivana uranium-vanadium deposit.

At the Ivana North target, 15-20 kilometres north of the Ivana deposit, the IP geophysical survey identified a 5-kilometre-long chargeability anomaly that may be indicative of potential pyrite-associated uranium-vanadium mineralization in the subsurface related to the superficial uranium-vanadium mineralization observed in the area.

## ***2020 Exploration***

On March 2, 2020, the Company launched a 4,500 metre RC drilling program but by mid-March had to suspended exploration field work due to the COVID-19 crisis. From the approximately 100 drill holes originally planned, only 8 holes were completed before suspension, 6 at Ivana Central and 2 at Ivana North. The technical team continued with an office-based data compilation and target delineation program throughout the remainder of the year. The review and reinterpretation of over 14 years of geological data collected at the project reclassified two areas as compelling targets (“Ivana Este” and “Cateo Cuatro”) with high potential for uranium-vanadium mineralization similar to the Company’s cornerstone Ivana deposit (see News Release dated November 2, 2020).

## ***2021 Exploration***

On February 1, 2021, Blue Sky enacted a detailed set of COVID-19 protocols and mobilized to restart field programs at Amarillo Grande. The planned 2021 programs announced included: completion of the 4,500-metre RC exploration drilling program originally announced in March 2020; planning and permitting to advance the Ivana Este and Quatro targets (see News Release dated November 2, 2020) to the drill stage; and engineering and process test work to support advanced technical studies.

The start of drilling was announced on February 17, 2021. The drill plan included a total of approximately 100 holes in the two highest priority exploration target areas delineated by the 2019 exploration program, Ivana Central and Ivana North. On June 23, 2021, Blue Sky announced that it had completed the first tranche of the program, consisting of 1,584 metres in 40 holes at the Ivana North target area. The drilling program tested an area covering 4 kilometres by 5 kilometres on roughly 400 to 800 metre centres utilizing a hydraulic drill rig. Results for these holes were announced on October 21, 2021 and included anomalous low-grade (less than 100ppm) uranium intercepts in thirty percent of the holes completed, often accompanied by anomalous pathfinder elements including molybdenum and selenium. Based on the similarities to the geochemical pathfinder footprint at the Ivana deposit, the Ivana North results are interpreted to confirm the potential for discovery of a REDOX front related uranium mineralized system in the Ivana North area. An additional six holes totaling 286 metres drilled at Ivana Central were reported at the same time as the first tranche of drilling from Ivana North. Two of the six holes intersected anomalous uranium, including 120 ppm U<sub>3</sub>O<sub>8</sub> over 1 metre at in hole AGIC-01.

Details of the second phase of process design test work were announced on April 6, 2021. A new bulk sample was composited from mineralized material of the Ivana deposit, for use in more advanced stage studies. The program is evaluating the efficiency of the precipitation process for each of uranium and vanadium, the consumption of precipitation reagents, the precise chemistry and flow rate of each process stream, and the purity of the uranium oxide and the vanadium pentoxide products relative to market standards. The program is again being overseen by independent technical advisor Chuck Edwards, P.Eng.

On September 28, 2021, Blue Sky launched a 3,500 metre RC drilling program to expand and upgrade the Ivana Deposit. The program was designed to include an estimated 260 shallow holes to test the potential expansion of the deposit to the west where the 2018 pit channel sampling program returned encouraging results. In addition, the program included holes in areas of lower drill hole density at the margins of, and within, the Ivana deposit to aid in upgrades to the mineral resource estimate that will support the advanced engineering studies.

## ***2022 Exploration***

### ***Ivana Deposit***

The Company announced on March 23, 2022 that it had completed the previously announced expansion and upgrading drilling program at the Ivana Deposit. The entire program collected 3,136 samples from 350 new holes, totaling 3,346m.

Results from 49 holes were reported on February 2, 2022 and April 5, 2022. These holes tested for a western extension to the deposit, in an area 500m to 1.5km west of the main deposit.

Fourteen holes returned anomalous uranium, with seven holes returning U<sub>3</sub>O<sub>8</sub> intervals >100ppm, including 1 metre at 0.7% (7027 ppm) U<sub>3</sub>O<sub>8</sub> in AGI-568. Notably, 23 holes returned at least one interval of more than 150ppm V<sub>2</sub>O<sub>5</sub>. The uranium and vanadium mineralization are present in all cases from surface, or near surface, forming a 3- to 4-metre-thick mineralized horizon where carnotite is interpreted as the principal uranium-vanadium mineral.

Results from 92 RC holes that tested areas of lower drill hole density at the margins of, and within, the western portion of the Ivana deposit were reported on April 5, 2022. The results confirmed the continuity of the mineralization in a number of locations, as well as the potential expansion to the south from hole AGI-601, which intersected 3 metres at 702 ppm U<sub>3</sub>O<sub>8</sub>, including 1 metre at 0.17% (1774 ppm) U<sub>3</sub>O<sub>8</sub>.

On September 8, 2022, the final 2,042 samples from 209 holes in the Ivana Deposit were reported. The assay results from drilling in the step-out zone confirmed the presence of uranium and vanadium mineralization near surface. This was highlighted by hole AGI-764, located 700m west of the boundary of the current mineral resource estimate, which returned 8 metres averaging 197ppm U<sub>3</sub>O<sub>8</sub> and 202ppm V<sub>2</sub>O<sub>5</sub> from 1 to 9 metres in depth, including 1m @ 805ppm U<sub>3</sub>O<sub>8</sub> and 243ppm V<sub>2</sub>O<sub>5</sub> starting at 1 metre. Vanadium was particularly notable in this area, with intercepts as high as 969ppm V<sub>2</sub>O<sub>5</sub> reported. Additional drilling in areas of low hole density with the deposit returned multiple significant uranium and vanadium intervals, such as 7m averaging 309ppm U<sub>3</sub>O<sub>8</sub> and 417 ppm V<sub>2</sub>O<sub>5</sub> including 1,273ppm U<sub>3</sub>O<sub>8</sub> and 1,260ppm V<sub>2</sub>O<sub>5</sub> over 1 m in AGI-817.

#### *Ivana Central*

On April 11, 2022, Blue Sky announced that it was resuming the 4,500 metre exploration drilling program to advance the Ivana Central target. Drilling was completed, for a total of 2,623 metres in 43 holes, including the 6 holes drilled in 2020.

#### *Other Targets*

A new program was announced on September 26, 2022 to advance the Ivana East and Cateo Cuatro targets. The field program at Cateo Cuatro included geological mapping, sampling, auger drilling and radiometric surveying to define drill targets. Recent exploration work at Ivana East, including (IP) pole-dipole tomography and seismic tomography refraction surveys, detected blind signatures between 10m and 30m in depth, similar to the Ivana deposit geological setting.

### **2023 Exploration**

#### *Ivana East and Cateo Cuatro*

On March 7, 2023, the Company announced the commencement of an RC drilling program at Ivana East comprising up to 1,200 metres in 24 holes, with 40 metres as the average depth. The program was delayed in May 2023 and subsequently postponed due to issues with drilling equipment. The Cateo Cuatro target is also drill-ready and will be tested in a subsequent program.

#### *Ivana Central & North*

Results from the drill program completed in 2022 at Ivana Central were announced on May 24, 2023. Due to the conditions at the prospect, the program used a combination of reverse circulation, direct circulation (DC) and diamond drilling to complete 2,607m of drilling in 43 scout holes. Radiometric borehole surveys were run on DC holes AGIC-007 to AGIC-043 as only limited drill cuttings were available. Radiometric probe results ranged up to 1442 cps (AGC-028), a result consistent with uranium results in the 150 ppm U range based on correlation with other drilling on the project. Analysis of the borehole radiometric anomalies and chip logging suggests that the target REDOX front was intercepted in 18 holes, delineating a +2.4km long and +1km wide NNW-SSE corridor at between 40m and 60m, open to the north and south.

A total of 281 1-m samples were collected from RC holes AGIC 001-006; Uranium ranged from less than detection to 120 ppm U<sub>3</sub>O<sub>8</sub> in 1m samples. Hole AGIC-043 was completed using diamond drilling to permit detailed logging of the geological units and the collection of better-quality samples. Multiple samples with elevated silver-cobalt-copper-uranium-tungsten were observed in the analytical results including a high-silver sample of 0.35m at 2880 ppm Ag. Core logging identified a black sand horizon between 46 and 62m in depth, interpreted as the REDOX front.

In Q3 the field team continued its assessment of the results to date from drilling at Ivana Central and North in order to plan future exploration programs at the prospects.

#### *Regional Exploration*

Prospecting mapping, soil and surface sampling, and radiometric surveys have been carried out over the southern sector of the Amarillo Grande project. Preliminary pit sampling and auger drilling programs were initiated in the third quarter of 2023 to delineate targets.

### *Ivana Deposit*

The results from the 2022 drill program at the Ivana deposit, as well as addition density measurements, were incorporated into the database and modelling work was updated by external consultants to evaluate the impact on the projects' mineral resources and the PEA completed in 2019.

Additional process design test work continued throughout the year and new uranium/vanadium leach tests were completed on a ~294 kg composite bulk sample (#2) prepared from RC chips from the Ivana deposit. The sample averaged 530ppm U<sub>3</sub>O<sub>8</sub> and the optimized leach conditions were 60 g/L Na<sub>2</sub>CO<sub>3</sub> and 10 g/L NaHCO<sub>3</sub>, at 95°C for 8 hours. For these new tests, uranium recovery for the alkaline leach stage was 96%, and the vanadium recovery was 35%. Despite the positive leach test results, a review of the methodology indicated that the optimized pre-concentration steps had not been executed as planned. As a result, this bulk testing is being repeated prior to proceeding to the next process test phase.

Membrane filtration was initiated after the leach tests. Four litres of leach solution were prepared for the small-scale membrane filtration tests, to identify the best nanofiltration and reverse osmosis membranes for the process. This work will be repeated as well once the appropriate bulk sample pre-concentration steps referred to above are executed.

An updated Social and Environmental baseline report for the Ivana area was commissioned, in preparation for a new Technical Report.

### ***2024 Mineral Resource Estimate and Preliminary Economic Assessment***

On February 22, 2024, the Company announced the results of a new PEA for the Ivana deposit. The updated PEA incorporates a new Mineral Resource Estimate, in which approximately 80% of the resources are now in the Indicated category. The PEA demonstrates robust economics from a surficial mining operation, entailing 11 years of uranium and vanadium production.

#### PEA Highlights (All figures in US dollars)

|   |              | <b><u>PEA Base Price Case Used</u></b> | <b><u>Sensitivity Spot Price Analysis</u></b> |
|---|--------------|--|---|
| <u>Price - U<sub>3</sub>O<sub>8</sub></u> | <u>\$/lb</u> | <u>\$75.00</u>                         | <u>\$105.00</u>                               |
| <u>Price - V<sub>2</sub>O<sub>5</sub></u> | <u>\$/lb</u> | <u>\$7.50</u>                          | <u>\$7.50</u>                                 |
| <b><u>After-Tax</u></b>                   |              |  |   |
| <u>NPV (0%)</u>                           | <u>\$M</u>   | <u>\$405.1</u>                         | <u>\$705.4</u>                                |
| <u>NPV (8%)</u>                           | <u>\$M</u>   | <u>\$227.7</u>                         | <u>\$ 418.3</u>                               |
| <u>IRR</u>                                | <u>%</u>     | <u>38.9%</u>                           | <u>57.0%</u>                                  |
| <u>Payback</u>                            | <u>years</u> | <u>1.9</u>                             | <u>1.3</u>                                    |

- Pre-production Capital Cost: \$159.7 million, includes \$35.4 million contingency
- Life of mine ("LOM") Sustaining Capital Cost: \$27.3 million, includes \$5.4 million contingency
- Average LOM Total Cash Cost net of credits: \$23.29/lb U<sub>3</sub>O<sub>8</sub>
- Average LOM All-In Sustaining Costs ("AISC") net of credits: \$24.95/lb U<sub>3</sub>O<sub>8</sub>

#### PEA Additional Key Assumptions & Inputs

- Years of Construction: 2
- Years of Production: 11
- Strip Ratio: 1.5:1 (waste/ore)
- Dilution: 3%
- Average Mining rate (waste + mill feed): 5.10 Mtpa
- Processing throughput: 2.17 Mtpa
- Process Plant Recoveries (Net), Uranium: 84.6%
- Process Plant Recoveries (Net), Vanadium: 52.5%
- Average Annual Production (LOM): 1.5 Mlbs/a U<sub>3</sub>O<sub>8</sub>
- LOM uranium production: 16.5 Mlbs U<sub>3</sub>O<sub>8</sub>

*[The PEA is preliminary in nature and is intended to provide an initial assessment of the project's economic potential and development options. The PEA mine schedule and economic assessment includes numerous assumptions and is based on both Indicated and Inferred mineral resources. Inferred resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the PEA results will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability. Additional exploration will be required to potentially upgrade the classification of the inferred mineral resources to be considered in future advanced studies.]*

An updated Mineral Resource Estimate was used for the PEA. The resource estimate includes data from an additional 350 reverse circulation drill holes (3,346 metres) completed up to March of 2022, and the effective date of the Mineral Resource estimate is October 14, 2023. The base case cut-off grade applied is 100 ppm U. The addition of the new drill holes decreased the drill hole spacing and 80% of the estimate is now classed as indicated mineral resources based on 2 holes within 100 m of a block.

The results of the Company's drilling program were reviewed, verified (including sampling, analytical and test data) and compiled by the Company's geological staff under the supervision of David Terry, Ph.D., P.Geol. Dr. Terry is a Director of the Company and a Qualified Person ("QP") as defined in National Instrument 43-101.

The Mineral Resource Estimate and associated information were prepared under the direction of Bruce Davis Ph.D., F.AusIMM, Consultant, and Susan Lomas, P.Geol., of Lions Gate Geological Consulting Inc. Both Dr. Davis and Ms. Lomas are independent Qualified Persons (QP's) as defined in NI 43-101.

The PEA and associated information were prepared under the direction of consultant Ken Kuchling, P.Eng., a mining engineer specializing in economic reviews and an independent Qualified Person as defined in NI 43-101.

Additional contributing independent Qualified Persons for the PEA are:

- Chuck Edwards, P.Eng. FCIM (metallurgy & processing)
- Ken Embree, P.Eng., of Knight Piésold Ltd (environmental, waste & water management)

**Table 1 - Estimate of Mineral Resource reported at 100 ppm Uranium Cut-off**

| Zone         | Class            | Tonnes (Mt) | Average Grade |                      |            |                      | Contained Metal        |                        |
|--------------|------------------|-------------|---------------|----------------------|------------|----------------------|------------------------|------------------------|
|              |                  |             | U (ppm)       | U <sub>308</sub> (%) | V (ppm)    | V <sub>2O5</sub> (%) | U <sub>308</sub> (Mlb) | V <sub>2O5</sub> (Mlb) |
| Upper        | Indicated        | 2.0         | 122           | 0.014                | 110        | 0.020                | 0.6                    | 0.9                    |
| Lower        | Indicated        | 17.6        | 358           | 0.042                | 104        | 0.019                | 16.4                   | 7.2                    |
| <b>Total</b> | <b>Indicated</b> | <b>19.7</b> | <b>333</b>    | <b>0.039</b>         | <b>105</b> | <b>0.019</b>         | <b>17.0</b>            | <b>8.1</b>             |

| <b>Total</b> | <b>Inferred</b>  | <b>5.6</b>  | <b>262</b>    | <b>0.031</b>         | <b>109</b> | <b>0.019</b>         | <b>3.8</b>             | <b>2.4</b>             |

**Notes to Table 1:**

1. As far as the QPs are aware, there are no issues related to environmental, permitting, legal, title, taxation, sociopolitical or marketing which could materially impact the mineral resource.
2. CIM Definition Standards were used for Mineral Resource classification and in accordance with CIM MRMR Best Practice Guidelines. Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability.
3. Extreme High-grade samples were capped to lower grades (Upper U 1000 ppm, V 400 ppm, Lower U 3000 ppm, V 1000 ppm) and then restricted using an outlier strategy where Upper composites were limited to U 400 ppm and V 300 ppm over 100 m and Lower composites were limited to U 2000 ppm and V 600 ppm over 100 m.
4. Mineral Resources were tabulated within a resource limiting pitshell using \$US 75/lb U price, recovery of 84.6% U; open pit mining cost of \$1.50/t mineralization mined; processing and G&A cost of \$6.30/t processed; pit slope of 32°. Bulk density value of 2.1 g/cm<sup>3</sup> was used for mineralized material.

5. The resource was estimated within distinct zones of elevated uranium concentration occurring within the host sediments. Vanadium is associated with uranium and is estimated within the same zones. There is no indication that Vanadium occurs outside of the elevated uranium zones in the Ivana deposit area in sufficient concentrations to justify developing estimation domains focused on Vanadium.

Supporting information for the Mineral Resource estimate and the PEA is detailed in an independent technical report dated April 2, 2024, prepared in accordance with National Instrument 43-101 Standards of Disclosure for Mineral Projects, (“NI 43-101”) and filed on SEDAR+ under the Company’s profile .

Future work on Ivana will include additional infill drilling to upgrade mineral resources, as well as advanced engineering studies that will incorporate the ongoing comprehensive environmental base line study and additional metallurgical and process test works, as well as mine design optimization, detailed permitting assessment, among other items required to support a prefeasibility study (“PFS”), which the Company is preparing to commence in the coming months. There is also potential to expand mine feed at Ivana, particularly to the west, where recent infill drilling returned low-uranium – rich-vanadium resources that may be potentially considered for mine-life extension during high-price scenario (see Blue Sky news release dated September 8, 2022). Furthermore, there remains excellent exploration potential in the 30-40km surrounding areas of the Ivana deposit for considering a potential cluster of deposit with a central facility, and elsewhere on the Amarillo Grande Project concessions.

### ***2024 Exploration***

The Company is working to acquire the environmental permits for further drilling at Ivana. In the meantime, field work in 2024 has concentrated on surface exploration. This has included mapping, soil and pit sampling, auger drilling and the first isotopic survey. The isotopic technique was concentrated in the Ivana sector, where anomalous isotopic patterns or footprints identified at the Ivana deposit will be compared with samples collected at other areas of known mineralization, like Ivana Central, in order to assist in defining or confirming new drill targets. If successful, this technique will be used as a regional tool to identify new targets and vector drilling for the potential discovery of blind uranium mineralization throughout the 145-km long AGP.

### **Neuquén Basin In-Situ Recovery (ISR) Targets**

In 2024 the Company launched a strategic initiative to broaden the Company’s medium to long-term prospects for discovery by acquiring projects in Neuquén Basin of Argentina that are prospective for discovery of uranium deposits amenable to In Situ Recovery (“ISR”) (see News Release dated June 17, 2024, filed on SEDAR+).

The Neuquén basin is comprised of a +7,000m thick marine and continental sedimentary sequence formed in the Upper Triassic to Middle Tertiary periods. The basin is recognized for its conventional and unconventional oil and gas resources and production. Uranium occurrences are present at different stratigraphic levels throughout the basin. The known occurrences are related to Cretaceous red-beds, such as: the historical uranium-copper-vanadium producing mines of Huemul and Agua Botada to the north in Mendoza province; the Rahue-Co, Cerro Mesa, Campesino Norte and Las Carceles uranium-copper-vanadium occurrences in the central region in Neuquén province; and the Amarillo Grande district to the south, in Rio Negro province.

The [World Nuclear Association](#) summarizes the process of in situ recovery mining (also known as solution mining or in situ leaching (“ISL”)) as “leaving the ore where it is in the ground, and recovering the minerals from it by dissolving them and pumping the pregnant solution to the surface where the minerals can be recovered. Consequently, there is little surface disturbance and no tailings or waste rock generated.” ISR-amenable uranium deposits provide the opportunity for low-cost, low-impact production and the potential for short development timelines. ISR is the most commonly used production method in uranium mining globally.

### **Corcova Project, Mendoza Province**

**Location and Ownership:** The Corcova Project is comprised of two adjacent exploration properties, totaling approximately 20,000 ha, at the northeastern edge of the Neuquén basin in Mendoza Province.

The Corcovo option agreement includes the right to acquire a 100% interest in both tenures under the following terms:

- Payment of US\$400,000 in 5 installments over 3 years.
- A 1% NSR payable to the vendor, on both properties, which Blue Sky has the right to buy back for a total of US\$500,000.
- A payment of US\$500,000 to the vendor if the project achieves commercial production.

**Geologic Potential:** The project covers a flat area at the southernmost edge of a Quaternary volcanic plateau situated approximately 600 metres above sea level (“masl”). This plateau overlays older sequences of the Neuquén Basin. In this region, the geological formation creates a natural trap for hydrocarbons, which migrated from central basin through porous sandstone horizons or “carriers”. This hydrocarbon migration may represent the oxidation-reduction front required for uranium accumulation, potentially forming economic deposits. The presence of lacustrine shales, which overlay the sandstone units, acts as barrier, preventing the migration of hydrocarbons and uranium.

This model was initially recognized by the state-owned National Atomic Energy Commission (“CNEA”) and followed by a pioneer exploration team prospecting uranium mineralization throughout the Neuquén basin using oil and gas (“O&G”) borehole radiometric data, acquired from Argentine government public databases, as a vectoring prospecting tool. Those surveys exposed uranium anomalies at the Corcovo area associated with the unconformity between Cretaceous units, (Rayoso and Neuquén groups) which are found at depths from 200m to 600m below surface. The presence of uranium anomalies related to high-porosity units, sealed by fine sediments, represents prospective geological conditions for exploring for ISR uranium deposits.

**Exploration:** Blue Sky has initiated the permitting process for field programs. At the same time, the Company is working to identify and prioritize prospective targets for future exploration and drill testing by updating and verifying the database for the project, which includes publicly available bore-hole surveys and seismic 2D/3D surveys from historic oil and gas (“O&G”) exploration.

#### **The Chihuidos Project, Neuquén Province**

**Location and Ownership:** The Chihuidos project is comprised of six exploration property units totaling almost 60,000 hectares which are 100% controlled by Blue Sky and were acquired by staking. The project is located 60km west of Añelo city, considered the capital of the unconventional gas production in Argentina.

**Geologic Potential:** These cover the core zone of the O&G producing Neuquén basin. The Chihuidos project covers a topographic high surrounded by airborne radiometric anomalies to the north and to the east previously detected by Calypso Uranium Corp. and related to uranium occurrences known as Cerro Mesa and Las Carceles. This range (~1300 masl) comprises a sequence of asymmetrical folded sediments, gently dipping to the east. The erosive windows Cerro Mesa and Las Carceles (~850 masl) to the east and north expose the uranium occurrences related to Cretaceous continental sediments of the Rayoso and Neuquén Groups. Within these units, the uranium mineralization is observed as lenses or tabular bodies hosted by channel-fill sandstones and fine conglomerates, interbedded between fine sediments. The mineralization is associated in both Groups with bleaching alteration, commonly 6 to 10m thick, and associated with organic matter or bitumen, representing the reductant required for uranium precipitation. Radiometric anomalies are also detected at depth in many of the O&G wells drilled in the area.

The exploration potential of this project is related to demonstrating continuity at depth of the uranium occurrences and airborne radiometric anomalies present on surface at the topographic lows surrounding the project. Those mineralized horizons are expected to be found as preserved uranium systems at depth, within gently-dipping permeable sandstone and limited by impermeable claystone or siltstones, also providing the basic required conditions for ISR mining techniques.

**Exploration:** Blue Sky has initiated the permitting process for field programs. At the same time, the Company is working to identify and prioritize prospective targets for future exploration and drill testing by updating and verifying the database for the project, which includes publicly available bore-hole surveys and seismic 2D/3D surveys from historic oil and gas (“O&G”) exploration.

## **Results of Operations – For the nine months ended September 30, 2024 compared to the nine months ended September 30, 2023**

### **Loss from operating activities**

During the nine months ended September 30, 2024, loss from operating activities increased by \$281,911 to \$2,866,545 compared to \$3,148,456 for the nine months ended September 30, 2023. The decrease in loss from operating activities is largely due to:

- A decrease of \$505,743 in exploration expenditures. Exploration expenditures were \$1,507,615 for the nine months ended September 30, 2024 compared to \$2,013,358 for the nine months ended September 30, 2023. The Company incurred lesser exploration expenditures during the nine months ended September 30, 2024 compared to higher exploration expenditures related to drilling program at Amarillo Grande project during the nine months ended September 30, 2023.
- A decrease of \$135,837 in corporate development and investor relations. Corporate development and investor relations were \$430,913 for the nine months ended September 30, 2024 compared to \$566,750 for the nine months ended September 30, 2023. The decrease is due to fewer activities relating to promotion of the Company's projects during the nine months ended September 30, 2024 compared to greater activities relating to promotion of the Company's projects during the nine months ended September 30, 2023.

The decreases were partially offset by:

- An increase of \$416,669 in professional fees. Professional fees were \$577,720 for the nine months ended September 30, 2024, compared to \$161,051 for the nine months ended September 30, 2023. The increase is due to the Company requiring more professional advice for its negotiations regarding the Corredor Americano S.A. ("COAM") proposed transaction during the nine months ended September 30, 2024.

### **Other Items**

During the nine months ended September 30, 2024, other income decreased by \$216,563 to \$266,549 compared to \$483,112 for the nine months ended September 30, 2023. The decrease in other income is largely due to:

- A decrease of \$382,131 in gain on sale of marketable securities. Gain on sale of marketable securities was \$256,639 for the nine months ended September 30, 2024 compared to \$638,770 for the nine months ended September 30, 2023. The decrease is due to the Company acquiring and transferring lesser marketable securities to facilitate intragroup funding during the nine months ended September 30, 2024 compared to the nine months ended September 30, 2023.
- An increase of \$163,865 in foreign exchange gain. Foreign exchange gain was \$409 for the nine months ended September 30, 2024 compared to \$163,456 for the nine months ended September 30, 2023. The increase is due to the fluctuation in foreign exchange rates and differing amounts of foreign currencies held during the nine months ended September 30, 2024 compared to the nine months ended September 30, 2023.

The loss and comprehensive loss for the nine months ended September 30, 2024 was \$2,599,996 or \$0.01 per basic and diluted share compared to a net loss and comprehensive loss of \$2,665,344 or \$0.01 per basic and diluted share for the nine months ended September 30, 2023.

## **Cash Flow**

### **Operating Activities**

Cash outflow from operating activities was \$2,550,677 for the nine months ended September 30, 2024 compared to \$2,499,927 for the nine months ended September 30, 2023. The increase in cash outflow results from lesser exploration expenditures and changes in non-cash working capital balances due to timing of receipt and payment of cash compared to the prior period.

## **Investing Activities**

Cash outflow used in investing activities was \$71,292 for the nine months ended September 30, 2024 compared to \$98,086 for the nine months ended September 30, 2023, as a result of lesser expenditures on mineral property interests during the nine months ended September 30, 2024 compared to the nine months ended September 30, 2023.

## **Financing Activities**

Cash inflow from financing activities was \$2,047,891 for the nine months ended September 30, 2024 compared to \$1,530,613 for the nine months ended September 30, 2023. Proceeds from issuance of common shares and warrants net of share issue costs were \$2,047,891 for the nine months ended September 30, 2024 compared to \$1,511,863 for the nine months ended September 30, 2023. Subscription receipts were \$Nil for the nine months ended September 30, 2024, compared to \$18,750 for the nine months ended September 30, 2023.

## **Results of Operations – For the three months ended September 30, 2024 compared to the three months ended September 30, 2023**

### **Loss from operating activities**

During the three months ended September 30, 2024, loss from operating activities increased by \$88,669 to \$1,026,528 compared to \$937,859 for the three months ended September 30, 2023. The increase in loss from operating activities is largely due to:

- A decrease of \$33,802 in exploration expenditures. Exploration expenditures were \$456,786 for the three months ended September 30, 2024 compared to \$490,588 for the three months ended September 30, 2023. The Company incurred lesser exploration expenditures during the three months ended September 30, 2024 compared to higher exploration expenditures related to drilling program at Amarillo Grande project during the three months ended September 30, 2023.

The decreases were partially offset by:

- An increase of \$180,603 in professional fees. Professional fees were \$279,496 for the three months ended September 30, 2024, compared to \$98,893 for the three months ended September 30, 2023. The increase is due to the Company requiring more professional advice for its negotiations regarding the COAM proposed transaction during the nine months ended September 30, 2024.

### **Other Items**

During the three months ended September 30, 2024, other income decreased by \$209,032 to other income of \$28,401 compared to \$237,433 for the three months ended September 30, 2023. The decrease in other income is largely due to:

- A decrease of \$210,734 in gain on sale of marketable securities. Gain on sale of marketable securities was \$29,758 for the three months ended September 30, 2024 compared to \$240,492 for the three months ended September 30, 2023. The increase is due to the Company acquiring and transferring lesser marketable securities to facilitate intragroup funding during the three months ended September 30, 2024 compared to the three months ended September 30, 2023.

The loss and comprehensive loss for the three months ended September 30, 2024 was \$998,127 or \$0.00 per basic and diluted share compared to a net loss and comprehensive loss of \$700,426 or \$0.00 per basic and diluted share for the three months ended September 30, 2023.

## **Balance Sheet**

At September 30, 2024, the Company had total assets of \$793,240 which is a decrease of \$532,460 from the \$1,325,700 in total assets at December 31, 2023. The change is primarily due to a decrease in cash of \$574,078 and prepaid expenses of \$33,769, partially offset by increase in mineral property interests of \$71,292 during the nine months ended September 30, 2024.

## **Selected Quarterly Financial Data**

|   | 2024                     |                          |                          | 2023                     |                          |                            | 2022                     |                            |

| Net Loss                                    | (998,127) <sup>(1)</sup> | (997,218) <sup>(2)</sup> | (604,651) <sup>(3)</sup> | (990,296) <sup>(4)</sup> | (700,426) <sup>(5)</sup> | (1,081,011) <sup>(6)</sup> | (883,907) <sup>(7)</sup> | (1,166,738) <sup>(8)</sup> |
| Net Loss per Common Share Basic and Diluted | (0.00)                   | (0.00)                   | (0.00)                   | (0.00)                   | (0.00)                   | (0.00)                     | (0.00)                   | (0.01)                     |

- (1) Variance from prior quarter primarily driven by decrease in exploration expenditures of \$175,264 and gain on marketable securities of \$98,072.
- (2) Variance from prior quarter primarily driven by increase in exploration expenditures of \$205,271, and professional fees of \$216,502.
- (3) Variance from prior quarter primarily driven by decrease in exploration expenditures of \$155,635, corporate development and investor relations of \$60,417, accounting and audit of \$60,000, and foreign exchange loss of \$51,783.
- (4) Variance from prior quarter primarily driven by increase in exploration expenditures of \$87,826, and accounting and audit fees of \$55,322, partially offset by decrease in gain on marketable securities of \$162,188.
- (5) Variance from prior quarter primarily driven by decrease in exploration expenditures of \$202,598, and foreign exchange loss of \$29,385, partially offset by increase in gain on marketable securities of \$231,439.
- (6) Variance from prior quarter primarily driven by decrease in exploration expenditures of \$136,398, gain on sale of marketable securities of \$380,172 and foreign exchange loss of \$83,176.
- (7) Variance from prior quarter primarily driven by decrease in foreign exchange loss of \$320,595, corporate development and investor relations of \$174,109, partially offset by increase in exploration expenditures of \$476,438, and gain on sale of marketable securities of \$206,278.
- (8) Variance from prior quarter primarily driven by decrease in exploration expenditures of \$1,324,328, and gain on sale of marketable securities of \$370,358, partially offset by increase in corporate development and investor relations of \$155,314.

## **Liquidity and Capital Resources**

The Company has experienced recurring operating losses and has an accumulated deficit of \$57,609,686 and shareholders' equity of \$150,862 at September 30, 2024. In addition, the Company has negative working capital of \$424,531 at September 30, 2024 and negative cash flow from operating activities of \$2,550,677. Working capital is defined as current assets less current liabilities and provides a measure of the Company's ability to settle liabilities that are due within one year with assets that are also expected to be converted into cash within one year. These factors create material uncertainties that may cast significant doubt about the Company's ability to continue as a going concern. The Company's continued operations, as intended, are dependent upon its ability to raise additional funding to meet its obligations and commitments (as disclosed in Note 1 of the Company's condensed consolidated interim financial statements for the nine months ended September 30, 2024) and to attain profitable operations. Management's plan in this regard is to raise equity financing as required. There are no assurances that the Company will be successful in achieving these goals.

The Company's condensed consolidated interim financial statements for the nine months ended September 30, 2024 do not include adjustments to the amounts and classifications of assets and liabilities and reported expenses that might be necessary should the Company be unable to continue as a going concern, which would be material.

The condensed consolidated interim financial statements for the nine months ended September 30, 2024 have been prepared in accordance with IFRS applicable to a going concern, which assume that the Company will realize its assets and discharge its liabilities in the normal course of business for the foreseeable future.

The Company's cash position at September 30, 2024 was \$476,787, a decrease of \$574,078 from the December 31, 2023 balance of \$1,050,865. The Company does not know of any trends, demand, commitments, events or uncertainties that will result in, or that are reasonably likely to result in, its liquidity either materially increasing or decreasing at present or in the foreseeable future. Material increases or decreases in liquidity are substantially determined by the success or failure of the exploration programs. The Company does not have any loans or bank debt and there are no restrictions on the use of its cash and cash equivalents resources.

The Company's business may be affected by changes in political and market conditions, such as interest rates, availability of credit, inflation rates, changes in laws, and national and international circumstances. Recent geopolitical events, and potential economic global challenges such as the risk of the higher inflation and energy crises, may create further uncertainty and risk with respect to the prospects of the Company's business.

## **Capital Stock**

The Company's authorized share capital comprises an unlimited number of common shares. The common shares do not have a par value.

As at September 30, 2024, an aggregate of 298,922,805 common shares were issued and outstanding.

### *Details of Issues of Common Shares in 2024*

On September 5, 2024, the Company completed the non-brokered private placement announced on August 14, 2024 and amended on August 28, 2024, consisting of 21,000,000 units at a price of \$0.05 per unit for gross proceeds of \$1,050,000. Each unit consists of one common share and one transferable common share purchase warrant. Each warrant entitles the holder thereof to purchase one additional common share in the capital of the Company at \$0.05 per share for four years from the date of issue. Finders' fees paid were \$47,202 cash and 944,048 non-transferable warrants exercisable into common shares at \$0.05 for four years from the date of issue with a fair value of \$31,430. Fair value of the warrants was calculated using the Black-Scholes pricing model and the following variables: risk-free interest rate – 2.82%; expected stock price volatility – 92.70%; dividend yield – 0%; and expected warrant life – 4 years.

On May 6, 2024, the Company completed the non-brokered private placement announced on April 17, 2024, consisting of 18,267,999 units at a price of \$0.06 per unit for gross proceeds of \$1,096,080. Each unit consists of one common share and one transferable common share purchase warrant. Each warrant entitles the holder thereof to purchase one additional common share in the capital of the Company at \$0.09 per share for two years from the date of issue. Finders' fees paid were \$50,987 cash and 849,777 non-transferable warrants exercisable into common shares at \$0.06 for two years from the date of issue with a fair value of \$25,328. Fair value of the warrants was calculated using the Black-Scholes pricing model and the following variables: risk-free interest rate – 4.23%; expected stock price volatility – 89.85%; dividend yield – 0%; and expected warrant life – 2 years.

### *Details of Issues of Common Shares in 2023*

On October 13, 2023, the Company completed the second and final tranche of the non-brokered private placement announced on September 26, 2023 and increased on October 4, 2023. The Company issued 7,133,333 units in this tranche at a price of \$0.075 per unit for gross proceeds of \$535,000. Each unit consisted of one common share and one transferable common share purchase warrant. Each warrant entitles the holder thereof to purchase one additional common share in the capital of the Company at \$0.12 per share for three years from the date of issue. Finder's fees paid were \$32,372 cash and 431,620 non-transferable warrants exercisable into common shares at \$0.075 for three years from the date of issue with a fair value of \$12,667. Fair value of the warrants was calculated using the Black-Scholes pricing model and the following variables: risk-free interest rate – 4.88%; expected stock price volatility – 88.61%; dividend yield – 0%; and expected warrant life – 2.48 years.

On October 4, 2023, the Company completed the first tranche of the non-brokered private placement announced on September 26, 2023 and increased on October 4, 2023. The Company issued 13,333,333 units in this tranche at a price of \$0.075 per unit for gross proceeds of \$1,000,000. Each unit consisted of one common share and one transferable common share purchase warrant. Each warrant entitles the holder thereof to purchase one additional common share in the capital of the Company at \$0.12 per share for three years from the date of issue. Finder's fees paid were \$64,921 cash and 865,620 non-transferable warrants exercisable into common shares at \$0.075 for three years from the date of issue with a fair value of \$32,289. Fair value of the warrants was calculated using the Black-Scholes pricing model and the following variables: risk-free interest rate – 4.85%; expected stock price volatility – 89.44%; dividend yield – 0%; and expected warrant life – 2.5 years.

On July 12, 2023, the Company completed the second and final tranche of the non-brokered private placement announced on June 8, 2023 and increased on July 12, 2023. The Company issued 7,861,032 units in this tranche at a price of \$0.075 per unit for gross proceeds of \$589,577. Each unit consisted of one common share and one transferable common share purchase warrant. Each warrant entitles the holder thereof to purchase one additional common share in the capital of the Company at \$0.12 per share for three years from the date of issue. Finder's fees paid were \$40,063 cash and 534,172 non-transferable warrants exercisable into common shares at \$0.075 for three years from the date of issue with a fair value of \$22,904. Fair value of the warrants was calculated using the Black-Scholes pricing model and the following variables: risk-free interest rate – 4.62%; expected stock price volatility – 92.2%; dividend yield – 0%; and expected warrant life – 2.62 years.

On June 19, 2023, the Company completed the first tranche of the non-brokered private placement announced on June 8, 2023. The Company issued 13,472,301 units in this tranche at a price of \$0.075 per unit for gross proceeds of \$1,010,423. Each unit consisted of one common share and one transferable common share purchase warrant. Each warrant entitles the holder thereof to purchase one additional common share in the capital of the Company at \$0.12 per share for three years from the date of issue. Finder's fees paid were \$48,074 cash and 640,985 non-transferable warrants exercisable into common shares at \$0.075 for three years from the date of issue with a fair value of \$27,441. Fair value of the warrants was calculated using the Black-Scholes pricing model and the following variables: risk-free interest rate – 4.57%; expected stock price volatility – 92.38%; dividend yield – 0%; and expected warrant life – 2.6 years.

#### *Outstanding Share Data*

As of the date of this report, there are 298,922,805 common shares of the Company issued and outstanding.

The following summarizes information about stock options outstanding and exercisable as at the date of this report:

| Number of Options |             | Exercise Price | Expiry Date      |
|-------------------|-------------|----------------|------------------|
| Outstanding       | Exercisable |                |                  |
| 11,750,000        | 11,750,000  | \$0.25         | January 29, 2026 |
| 11,750,000        | 11,750,000  |                |                  |

The Company had the following warrants outstanding as at the date of this report:

| Number of Warrants Outstanding | Exercise Price | Expiry Date       |
|--------------------------------|----------------|-------------------|
| 587,300                        | \$0.20         | December 2, 2024  |
| 30,520                         | \$0.20         | December 19, 2024 |
| 5,863,097                      | \$0.25         | June 7, 2025      |

#### **Commitments**

##### *Proposed Transaction*

The Company has entered into the Proposed Transaction that is described on page 2 of this MD&A.

### *Financial Advisory Services Agreement*

On August 1, 2023, the Company entered into an agreement with ACP Capital Markets LLC (“ACP”) to provide financial advisory services. In consideration for the services, the Company has paid US\$75,000, and a progress fee of US\$25,000 is payable on the date of letter of intent. Upon closing of a transaction with a purchaser identified by ACP, the Company shall pay a success fee of 2.5% of the consideration received no less than US\$450,000. The Company and ACP are unrelated and unaffiliated entities. The agreement remains in effect until terminated by one of the parties. The success fee is also payable to ACP in the event of closing of a transaction within 12 months after termination of this agreement.

On September 20, 2023, the Company entered into an agreement with Yaderay S.A. (“SCP”) to provide financial advisory services for a term of 12 months. The Company and SCP are unrelated and unaffiliated entities. In consideration for the services, the Company shall pay 5% of the gross proceeds received from purchasers identified by SCP, subject to TSX-V approval.

The Company has engaged ACP and SCP as joint financial advisors in connection with the Proposed Transaction that is described on page 2 of this MD&A.

### *Management Services Agreement*

Grosso Group provides its member companies with administrative and management services. The member companies pay monthly fees to Grosso Group on a cost recovery basis. The fee is based upon a pro-rating of Grosso Group’s costs including its staff and overhead costs among the member companies. The current fee is \$1,000 per month. This fee is reviewed and adjusted quarterly based on the level of services required.

The table below represents the Company’s aggregate commitment to Grosso Group over the term of the Management Services Agreement.

|                               | 1 Year | 2 Years | 3 Years | 4-5 Years | More than 5 Years |
|-------------------------------|--------|---------|---------|-----------|-------------------|
|                               | \$     | \$      | \$      | \$        | \$                |
| Management Services Agreement | 3,000  | 12,000  | -       | -         | -                 |

The Company has a consulting agreement with its Chairman of the Board (the “Chairman Agreement”). The termination provisions of the Chairman Agreement provide that a fee of 24 months’ compensation be paid in the event of termination without cause. In the event of a change of control, or the sale of all or substantially all of the assets of the Company to a bona fide third party purchaser, the Chairman would receive an amount equal to 24 months’ compensation. As of September 30, 2024, the Company would have to pay \$117,737 to the Chairman in the event of termination without cause or a change of control.

The Company has a consulting agreement with its President and CEO (the “CEO Agreement”). The termination provisions of the CEO Agreement provide that a fee of 24 months’ compensation be paid in the event of termination without cause. In the event of a change of control, or the sale of all or substantially all of the assets of the Company to a bona fide third party purchaser, the CEO would receive an amount equal to 24 months’ compensation. As of September 30, 2024, the Company would have to pay \$141,284 to the CEO in the event of termination without cause or a change of control.

The Company has a consulting agreement with its CFO (the “CFO Agreement”). The termination provisions of the CFO Agreement provide that a fee of 24 months’ compensation be paid in the event of termination without cause. In the event of a change of control, or the sale of all or substantially all of the assets of the Company to a bona fide third party purchaser, the CFO would receive an amount equal to 24 months’ compensation. As of September 30, 2024, the Company would have to pay \$66,579 to the CFO in the event of termination without cause or a change of control.

The Company has a consulting agreement with its Corporate Secretary (the “Corporate Secretary Agreement”). The termination provisions of the Corporate Secretary Agreement provide that a fee of 24 months’ compensation be paid in the event of termination without cause. In the event of a change of control, or the sale of all or substantially all of the assets of the Company to a bona fide third party purchaser, the Corporate Secretary would receive an amount equal to 24 months’ compensation. As of September 30, 2024, the Company would have to pay \$79,895 to the Corporate Secretary in the event of termination without cause or a change of control.

The Company has a consulting agreement with its Controller (the “Controller Agreement”). The termination provisions of the Controller Agreement provide that a fee of 12 months’ compensation be paid in the event of termination without cause. In the event of a change of control, or the sale of all or substantially all of the assets of the Company to a bona fide third party purchaser, the Controller would receive an amount equal to 12 months’ compensation. As of September 30, 2024, the Company would have to pay \$37,404 to the Controller in the event of termination without cause or a change of control.

### **Contingency**

During 2021, the Company’s wholly owned Argentine subsidiary, Minera Cielo Azul S.A. was named in a lawsuit (the “Lawsuit”) introduced before the Supreme Court of the Province of Rio Negro by anti-mining, environmental activists (the “Plaintiffs”) in Argentina who were asserting environmental protection rights, among other arguments against the Amarillo Grande project, comprised of Ivana, Anit and Santa Barbara projects. On January 12, 2022, the Company announced that the Lawsuit and a subsequent appeal filed before the same court had been dismissed. The Plaintiffs did not file any further appeals and therefore the ruling is considered final.

A former employee and consultant to the Company is claiming to be owed severance in Argentina. The Company believes the amount of severance being claimed by the former employee and consultant is excessive and is disputing the amount. The actual amount of severance is still being negotiated and may be material to the Company.

### **Off-Balance Sheet Arrangements**

The Company does not utilize off-balance sheet arrangements.

### **Related Party Transactions**

#### *Grosso Group Management Ltd.*

On April 1, 2010, the Company entered into a Management Services Agreement (“Agreement”) with Grosso Group Management Ltd. (Grosso Group) to provide services and facilities to the Company. Grosso Group provides its member companies with administrative and management services. The member companies pay monthly fees to Grosso Group on a cost recovery basis. The fee is based upon a pro-rating of Grosso Group’s costs including its staff and overhead costs among the member companies. The fee is reviewed and adjusted quarterly based on the level of services required. The Agreement expires on December 31, 2024 and is automatically renewed for a period of two years pursuant to the terms of the Agreement.

The Agreement contains termination and early termination fees in the event the services are terminated by the Company. The termination fee includes three months of compensation and any contractual obligations that Grosso Group undertook for the Company, up to a maximum of \$750,000. The early termination fees are the aggregate of the termination fee in addition to the lesser of the monthly fees calculated to the end of the term and the monthly fees calculated for eighteen months, up to a maximum of \$1,000,000.

(1) A company related through common directors that receives reimbursement for shared office costs and overhead.

(2) A company owned by Joseph Grosso of Blue Sky Uranium Corporation.

Balances are unsecured, non-interest bearing and has no specific terms of repayment.

### **Events After the Reporting Period**

#### *Warrants expiry*

- 4,760,000 warrants with an exercise price of \$0.35 per unit expired on October 23, 2024.
- 16,780,000 warrants and 1,381,000 warrants that were set to expire on December 2 and December 19, 2024 respectively have been extended to December 2 and December 19, 2027 respectively. These warrants were originally issued under a private placement completed in December 2022. The exercise price of the warrants remain at \$0.20.

### **Critical Accounting Estimates and Recent Accounting Pronouncements**

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amount of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the period. Actual results may differ from these estimates.

Reference should be made to the Company's significant accounting policies contained in Note 2 of the Company's condensed consolidated interim financial statements for the nine months ended September 30, 2024. These accounting policies can have a significant impact on the financial performance and financial position of the Company.

#### *New and amended IFRS standards that are effective for the current period:*

Amendments to IAS 1, Classification of Liabilities as Current or Non-current (effective January 1, 2024) provide a more general approach to the classification of liabilities based on the contractual arrangements in place at the reporting date. This amendment did not have any impact on the Company's consolidated financial statements.

#### *New Accounting Standards and Interpretations not yet effective*

The following new standards, amendments and interpretations have been issued but are not effective for the nine months ended September 30, 2024 and accordingly, they are not expected to have any impact and have not been applied in preparing these condensed consolidated interim financial statements.

Amendments to IAS 21, Lack of Exchangeability (effective January 1, 2025) requires companies to provide more useful information in their financial statements when a currency cannot be exchanged into another currency. The amendments respond to stakeholder feedback and concerns about diversity in practice in accounting for a lack of exchangeability between currencies. The amendments will help companies and investors by addressing a matter not previously covered in the accounting requirements for the effects of changes in foreign exchange rates. These amendments will require companies to apply a consistent approach in assessing whether a currency can be exchanged into another currency and when it cannot, in determining the exchange rate to use and the disclosures to provide.

IFRS 18, Presentation and Disclosure in Financial Statements introduces three sets of new requirements to give investors more transparent and comparable information about companies' financial performance for better investment decisions.

- i. Three defined categories for income and expenses—operating, investing and financing—to improve the structure of the income statement, and require all companies to provide new defined subtotals, including operating profit.
- ii. Requirement for companies to disclose explanations of management-defined performance measures (MPMs) that are related to the income statement.
- iii. Enhanced guidance on how to organize information and whether to provide it in the primary financial statements or in the notes.

This new standard is effective for reporting periods beginning on or after January 1, 2027.

### **Financial Instruments**

The Company thoroughly examines the various financial instrument risks to which it is exposed and assesses the impact and likelihood of those risks. These risks may include credit risk, liquidity risk, currency risk, and interest rate risk.

#### ***Credit risk***

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss. Financial instruments that potentially subject the Company to credit risk consist of cash. The Company has reduced its credit risk by depositing its cash and cash equivalents and short-term investments with financial institutions that operate globally. Therefore, the Company is not exposed to significant credit risk and overall the Company's credit risk has not changed significantly from the prior period.

#### ***Liquidity risk***

Liquidity risk is the risk that the company will not be able to meet its financial obligations as they fall due. The Company has in place a planning and budgeting process to help determine the funds required to ensure the Company has the appropriate liquidity to meet its operating and growth objectives. The Company has historically relied on issuance of shares and warrants to fund exploration programs and may require doing so again in the future.

#### ***Market risk***

##### ***(i) Currency risk***

Financial instruments that impact the Company's net earnings or other comprehensive income due to currency fluctuations include cash and cash equivalents, and accounts payable all denominated in United States dollars and Argentinean pesos. A 10% change in US dollar and the Argentinean peso exchange rates relative to Canadian dollar would have insignificant impact on the Company's net loss:

- A 10% change in the US dollar exchange rate relative to the Canadian dollar would change the Company's net loss by approximately \$7,000.
- A 10% change in the Argentinean peso exchange rate relative to the Canadian dollar would change the Company's net loss by approximately \$8,000.

**(ii) Interest rate risk**

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate due to changes in market interest rates. The fair value of cash approximates its carrying values due to the immediate or short-term maturity of this financial instrument. Other current financial assets and liabilities are not exposed to interest rate risk because they are non-interest bearing or have prescribed interest rates.

**Capital Management**

The Company's objectives of capital management are intended to safeguard the entity's ability to support the Company's normal operating requirements on an ongoing basis, continue the development and exploration of its mineral properties and support any expansionary plans. The capital structure of the Company consists of equity attributable to common shareholders, comprised of issued capital, reserves and deficit. The Company manages the capital structure and makes adjustments in light of changes in economic conditions and the risk characteristics of the Company's assets.

To effectively manage the entity's capital requirements, the Company has in place a planning and budgeting process to help determine the funds required to ensure the Company has the appropriate liquidity to meet its operating and growth objectives. The Company has historically relied on issuance of shares to develop its mineral projects and may require doing so again in the future. The Company is monitoring market conditions to secure funding at the lowest cost of capital. The Company is exposed to various funding and market risks which could curtail its access to funds. The Company is not subject to any external covenants. There were no changes in the Company's approach to capital management during the nine months ended September 30, 2024.

**Risk Factors and Uncertainties**

The Company's operations and results are subject to a number of different risks at any given time. These factors, include but are not limited to disclosure regarding exploration, additional financing, project delay, titles to properties, price fluctuations and share price volatility, operating hazards, insurable risks and limitations of insurance, management, foreign country and regulatory requirements, currency fluctuations and environmental regulations risks. Exploration for mineral resources involves a high degree of risk. The cost of conducting programs may be substantial and the likelihood of success is difficult to assess. A number of the risks and uncertainties are discussed below:

*History of losses:* The Company has historically incurred losses as evidenced by its condensed consolidated interim financial statements for the nine months ended September 30, 2024 and 2023. The Company has financed its operations principally through the sale of its equity securities. The Company does not anticipate that it will earn any revenue from its operations until its properties are placed into production, if ever. If the Company is unable to place its properties into production, the Company may never realize revenues from operations, will continue to incur losses and you may lose the value of your investment.

*Joint ventures and other partnerships:* The Company may seek joint venture partners to provide funding for further work on any or all of its other properties. Joint ventures may involve significant risks and the Company may lose any investment it makes in a joint venture. Any investments, strategic alliances or related efforts are accompanied by risks such as:

1. the difficulty of identifying appropriate joint venture partners or opportunities;
2. the time the Company's senior management must spend negotiating agreements, and monitoring joint venture activities;
3. the possibility that the Company may not be able to reach agreement on definitive agreements, with potential joint venture partners;
4. potential regulatory issues applicable to the mineral exploration business;
5. the investment of the Company's capital or properties and the loss of control over the return of the Company's capital or assets;
6. the inability of management to capitalize on the growth opportunities presented by joint ventures; and
7. the insolvency of any joint venture partner.

There are no assurances that the Company would be successful in overcoming these risks or any other problems encountered with joint ventures, strategic alliances or related efforts.

*Unexpected delays:* The Company's minerals business will be subject to the risk of unanticipated delays including permitting its contemplated projects. Such delays may be caused by fluctuations in commodity prices, mining risks, difficulty in arranging needed financing, unanticipated permitting requirements or legal obstruction in the permitting process by project opponents. In addition to adding to project capital costs (and possibly operating costs), such delays, if protracted, could result in a write-off of all or a portion of the carrying value of the delayed project.

*Potential conflicts of interest:* Several of the Company's directors are also directors, officers or shareholders of other companies. Such associations may give rise to conflicts of interest from time to time. Such a conflict poses the risk that the Company may enter into a transaction on terms which could place the Company in a worse position than if no conflict existed. The directors of the Company are required by law to act honestly and in good faith with a view to the best interest of the Company and to disclose any interest which they may have in any project or opportunity of the Company. However, each director has a similar obligation to other companies for which such director serves as an officer or director. The Company has no specific internal policy governing conflicts of interest.

*Competition with larger, better capitalized competitors:* The mining industry is competitive in all of its phases. The Company faces strong competition from other mining companies in connection with the acquisition of properties producing, or capable of producing, base and precious metals. Many of these companies have greater financial resources, operational experience and technical capabilities than the Company. As a result of this competition, the Company may be unable to maintain or acquire attractive mining properties on terms it considers acceptable or at all. Consequently, the Company's revenues, operations and financial condition could be materially adversely affected.

*The Company does not intend to pay dividends:* The Company has not paid out any cash dividends to date and has no plans to do so in the immediate future. As a result, an investor's return on investment will be solely determined by his or her ability to sell common shares in the secondary market.

*Title Risk:* Although the Company has taken steps to verify title to mineral properties in which it has an interest, these procedures do not guarantee the Company's title. Such properties may be subject to prior agreements or transfers and title may be affected by undetected defects.

*Price Risk:* The Company is exposed to price risk with respect to commodity and equity prices. Equity price risk is defined as the potential adverse impact on the Company's earnings due to movements in individual equity prices or general movements in the level of the stock market. Commodity price risk is defined as the potential adverse impact on earnings and economic value due to commodity price movements and volatilities. The Company's property has exposure to predominantly uranium. The prices of these metals, especially uranium, greatly affect the value of the Company and the potential value of its property and investments.

*Financial Markets:* The Company is dependent on the equity markets as its sole source of operating working capital and the Company's capital resources are largely determined by the strength of the junior resource markets and by the status of the Company's projects in relation to these markets, and its ability to compete for the investor support of its projects. The coronavirus outbreak has caused economic disruption worldwide and the resulting impact may affect the Company's ability to raise additional equity financing.

*Political Risk:* Exploration is presently carried out in the Argentina and is currently being reviewed worldwide. This exposes the Company to risks that may not otherwise be experienced if all operations were domestic. Political risks may adversely affect the Company's potential projects and operations. Real and perceived political risk in some countries may also affect the Company's ability to finance exploration programs and attract joint venture partners, and future mine development opportunities.

*Credit Risk:* Credit risk is the risk of an unexpected loss of a third party to a financial instrument fails to meet its contractual obligations. The Company is subject to credit risk on cash and cash equivalents. The Company limits its exposure to credit loss by placing its cash with major financial institutions.

*Liquidity Risk:* Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they are due. The Company ensures that there is sufficient capital in order to meet short-term business requirements, after taking into account the Company's holdings of cash and cash equivalents. The Company raises capital through equity issues and its ability to do so is dependent on a number of factors including market acceptance, stock price and exploration results. The Company's cash is invested in bank accounts.

*Interest Risk:* The Company's bank accounts do not earn interest income. Cash and cash equivalents bears no interest. The fair value of cash approximates its carrying values due to the immediate or short-term maturity of this financial instrument.

*Currency Risk:* Business is transacted by the Company in a number of currencies. Fluctuations in exchange rates may have a significant effect on the cash flows of the Company. Future changes in exchange rates could materially affect the Company's results in either a positive or negative direction.

*Community Risk:* The Company has negotiated with the local communities on its mineral property concessions for access to facilitate the completion of geological studies and exploration work programs. The Company's operations could be significantly disrupted or suspended by activities such as protests or blockades that may be undertaken by such certain groups or individuals within the community.

*Environmental Risk:* The Company seeks to operate within environmental protection standards that meet or exceed existing requirements in the countries in which the Company operates. Present or future laws and regulations, however, may affect the Company's operations. Future environmental costs may increase due to changing requirements or costs associated with exploration and the developing, operating and closing of mines. Programs may also be delayed or prohibited in some areas. Although minimal at this time, site restoration costs are a component of exploration expenses.

### **Disclosure Controls and Procedures and Internal Control over Financial Reporting**

On November 23, 2007, the British Columbia Securities Commission exempted Venture Issuers from the requirement to certify disclosure controls and procedures, as well as, Internal Controls over Financial Reporting as of December 31, 2007, and thereafter. The Company is a Venture Issuer; therefore it files the venture issuer basic certificates. The Company makes no assessment relating to establishment and maintenance of disclosure controls and procedures as defined under National Instrument 52-109 as at September 30, 2024.

### **Additional Information**

Additional information relating to the Company, including news releases, financial statements and prior MD&A filings, is available on SEDAR+ at [www.sedarplus.ca](http://www.sedarplus.ca).

The investor relations program is focused on shareholder communications, corporate development and building the Company an active following of investment professionals in Canada, US and Europe. The Company also maintains a website at [www.blueskyuranium.com](http://www.blueskyuranium.com).
