PEA is preliminary in nature and is intended to provide an initial assessment of the project's economic potential and development options. The PEA mine schedule and economic assessment includes numerous assumptions and is based on both Indicated and Inferred mineral resources. Inferred resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the PEA results will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability. Additional exploration will be required to potentially upgrade the classification of the inferred mineral resources to be considered in future advanced studies.

## AMARILLO GRANDE PROJECT

The district-scale Amarillo Grande Project in Rio Negro province is an excellent candidate to be the first low-cost, domestic uranium supplier to the growing Argentine nuclear market.

An earn-in joint venture with COAM sets a clear path to production at Ivana, with no funding by BSK now through development, as well as exploration commitments for key targets. (See [News Release 12/2/24](#))

## 2025 Programs at Ivana Fully Funded by Strategic Joint-Venture

- Prefeasibility/feasibility program: engineering & optimization to improve economics
- 6-month near-deposit exploration program to delineate new mineralization for resource expansion
  - Up to 6,000 metres of RC drilling in 315 shallow holes
  - Will test areas around the Ivana deposit, up to 2km away
  - Includes testing new, previously inaccessible high-priority target
