PEA is preliminary in nature and is intended to provide an initial assessment of the project's economic potential and development options. The PEA mine schedule and economic assessment includes numerous assumptions and is based on both Indicated and Inferred mineral resources. Inferred resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the PEA results will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability. Additional exploration will be required to potentially up grade the classification of the inferred mineral resources to be considered in future advanced studies.

AMARILLO GRANDE PROJECT

The district-scale Amarillo Grande Project in Rio Negro province is an excellent candidate to be the first low-cost, domestic uranium supplier to the growing Argentine nuclear market.

An earn-in joint venture with COAM sets a clear path to production at Ivana, with no funding by BSK now through development, as well as exploration underway at key targets. (See [News Release 12/2/24](#))

Programs at Ivana Fully Funded by Strategic Joint-Venture

- Path to bring Ivana deposit to feasibility established and work underway
 - Infill drill program at Ivana deposit successfully completed; new higher-grade zone identified that may contribute to increased tonnage and improved economics in future resource estimate/economic study
- New diamond drilling programs underway at high-priority targets less than 10km from Ivana Deposit, including Ivana Gateway (~1,200m completed) and Ivana East (up to 1,200m underway).
